Circulaire

aux Directeurs

Le temps fait jusqu'ici a été généralement défavorable aux récoltes et aux travaux des champs. Les pluies fréquentes et abondantes qui ont arrosé presque toutes les parties de la France ont entravé les travaux de fenaison et de moissonnage, et ont causé des dégâts sérieux aux céréales, aux fourrages artificiels et aux prairies naturelles. Les pertes sont déjà très importantes et elles augmenteront encore si le mauvais temps persiste.

Les vignes, qui avaient souffert des gelées du printemps, ont été également atteintes par les pluies et les orages. Le mildiou a fait son apparition dans plusieurs régions viticoles et il est à craindre que la floraison ne s'effectue pas dans de bonnes conditions.

Les cours des céréales ont subi une hausse importante, qui a été provoquée par les mauvaises nouvelles des récoltes. Le blé a atteint des prix très élevés, et il est à craindre que la cherté du pain ne vienne aggraver la situation des classes ouvrières.

Il est donc à désirer que le temps se remette au beau, afin que les travaux de la moisson puissent s'effectuer dans de bonnes conditions.

Specific Gravity. Bodies, whether Fluid or Solid, have a certain Weight, which in Bodies of Equal Size is greater or less, as they contain more or less Matter in the same Space. Thus a Piece of Iron of an inch square and a Foot in length, is heavier than a Piece of Wood of the same Size and Length, because there is more Matter in the former than in the latter. Hence arises the Difference between Bodies in point of Gravity, which is called their Specific Gravity, or Weight in Proportion to Bulk. Thus, for Instance, Equal Quantities of Water and Quicksilver, the latter will be found to weigh fourteen times as much as the former. So that a Cubic Inch of Water, which weighs but one Ounce, will require fourteen Ounces of Quicksilver to balance it in the Scales. Hence arises the great Difference between Bodies as to their Specific Gravity; and as Liquids are fluid, they will not remain in the Vessel that contains them, unless it be entirely filled up.

Bodies

General No. } 1887—8.
No. 234

With Secretary's No. 2861-8 dated the 6th Instant, calling for a Report on the present prospects of the season.

In reply to the above, I have the honor to state that the Rainfall of the current year, upto the end of June last, has been 3 Inches for this District, whereas it had been 8 Inches for the same period of last year, as per accompanying Comparative statement. Cultivation has therefore been retarded, and consid-

Operations generally work Commenced Early
which by this time, Last year, Caused
Roads, to Run Grown Some with Tufts
and Generally Roads harvested. The Cotton
has suffered a little more, and this time
for Rainy the former is much better
Great hopes are Entertained of a
Speedy Gathering. Should it be
not Ratified before the Close of this
month, it will become a matter for
Serious Consideration then.

2. The above is Given Verbatim
-forte available in the Office, and from
observations made by the Undersigned
so far as Possible. Special Returns are
also called for from the Several Navy Yards
on Each Receipt, another Reference will
be made in Continuation of this.

Rec'd

Tinkali Division

No: 167

Deputy Commissioner's Office

Tinkali 11th July, 83.

To,

The Secretary to H.E.H.

Diwan of Khyrpore,

Sir,

Referring to the Proceedings of the Diwan No: 2853-8/69 of 6th instant calling for a statistical report on the prospects of the season in this district, I have the honour to submit the following remarks. —

2. The present state of the season in Tinkali is not pleasant and promising. — The quantity of rain gauged in the taluka of the District since the Commencement of the official year, 1st April to the end of June last, is 2.6 - 54/100 against 5.0 - 70/100 in the corresponding months of 1880. The decrease

decrease of 3.22 in. in excess of 50 per cent as particularized in the margin showing an average fall of 3.57 against 7.58 in the previous year. The result is that almost all the ordinary Tanks have become dry and those big enough for large streams and jungle Mullahs hardly contain water sufficient to protect the "Pyshack" standing

tanks there. In most parts of the District wells are failing to supply water for the use of Villages and Cattle.

3. Excepting good and seasonable showers during the last quarter, the agricultural Classes prepared as usual to commence their

this work, such as collecting manure on fields, preparing and transporting [illegible] of their loads to their proper places; but as the soil is found suitable by the rain, they will not till the remaining part of their holdings. The number of fields thus remain untilled is more than 50 per cent. The ryots are ready and anxious waiting for rain. They will resume their agricultural operations as soon as the soil becomes moist and fit for tillage.

4. The ordinary condition of cultivation in each of the talks of this district and what steps have been taken and their condition in detail will be shown in the statement to be prepared and submitted on the receipt of replies from the Talukdars to my notes on the subject. But as this will take a few days hence, I give a brief description of the cultivation with reference to the soil, showing my tour through the talks. The tank

usually

already sown in some of the districts of this district during the month of May, are black gram, green gram, Cavanum seed 1st sort, Ground nuts unshorn, and in June, Bavagu, Castor oil, Horse, Redishes and Turnip, Radish, and in July, Ragi Cavanum seed 2nd sort, Cumb, Chal, Beans, Horse and Castor oil in all the districts, and Turnip Radish under tanks which receive a full supply of water. — In the present season none of these seeds are sown in the districts with the exception of Coimbatore, where some people have sown black gram and green gram on the low and moist fields. In other districts these crops cannot be grown because, if it a few good showers fall before the end of July, all the other seeds mentioned above will be sown more or less, which if blessed with timely rains, may yield nearly 2 to 3 fold in average, and the Ryots finding which is about 3 to 4 months old under dry tanks will also produce a good harvest. If not all these crops will be greatly affected.

5

5. The cultivation of gardens, tapioca, and ~~bean~~ ———, possibly only 2 or 3 times by digging with a mamoty is responsible for the poor condition.

6. The grazing has already become very severe, and, if the rains fail again for a month more it will increase the difficulty of getting a sufficient fodder which has already suffered from, and been reduced in number, by mortality and other diseases.

7. If the rains withhold again beyond, all the food crops will have nearly a failure, which will create alarm in the minds of people. The crops of Ragi and Cholam, such as Horsegram, Avare, Navane and Bengal gram being grown on limited area and scarcely used for food, will not, even if the crops are, help much the suffering people.

8. Some of the agricultural classes, who suffered and lost the experience of the recent famine, have practised less and less food grains. The market is now

some places is not still artificial. As the prices of food grains, chiefly Jowari, Rice, Gram &c which were generally stationary during the month of May, have subsequently risen in many of the talukas, persons procuring grain do not like to open their stores. I beg to enclose herein for ready reference a statement showing the average prices of grains in June last compared with those of the last and preceding years. A glance at this will show that the food grains are not so dear as to anticipate any distress or scarcity at present. —

9. I lately visited all the talukas and have seen some important and useful works therein. Of the rains without the usual aggregate, and if there is any likelihood of scarcity, I will then submit any proposals of such nature in detail, and for such orders of the Govt as he may then please to give.

10. The rain register for the months of

Statement showing the rate of food grains per rupee in the Sibsagar District.

No 199

Native Affairs,
Deputy Commrs Office
Chittagong the 8 June 1885

36

To

The Secretary to Govt of
Lr
Bengal
D-D

Serial No. 4

With reference to the Proceedings
of the Govt of Bengal No 2861-5 Dated
69
Rangpore 8th July 1885, Received by last
post, I have the honor to submit the fol-
lowing report on the prospect of the season
in the Native district.

2. The season has been an unusually
light one throughout the District, but in the
Inland Tracts of Cutgaon, Hathia
Latiali & the Northern portion of
Chittagong, sufficient rain has
fallen to enable the ryots to go on with
their rice cultivation, and about these
Tracts, there is no cause for anxiety

3. In the Southern & South Western
Parganas of Chittagong & about
Chittagong itself, there is a good deal
of rice sown about the Early
part of May, or Early in June - This has
suffered from the want of rain in June

a good deal, but the Clouds we have
had, and are having, are Cumuli &
and through the Crop will be light and
deficient in Grain, unless there is another
Crop to it, it will average at least
an eighth a mile.

4. In Barnaul, Kulundinskaya, there
there is, or has been, been no Crop, for
the Egyptian Locusts in the Early Spring
Early or "Red Bugs". In Crimea, places
known as Old Crimea, Evpatoria,
Feodosia & Kerch, have been
Crop, but there has been Rain, but to
such a small extent that though having
been put down, will make little difference
to the Food Supply of the Country.

5. The Caterpillars of Bugs should
ought to be known of during the Crop
fortnight or three weeks, the Rain
Crops, Weather will be decisive - if
Rain does come, the failure or
partial failure of the Crops
in Grain will have some bearing
fully little has on the Prices

Yours

Patrick

I have &c

Chief Commissioner
Coorg & Wynaad

41

Report on the prospects of the season for
in the Kurnool District.

Kurnool Camp,
February 1917

Owing to the deficient fall of the earlier rains, the Jowari, green gram, black gram and yellow (sweet oil seed) crops raised in the Kottakere and Kurnoolla Earlier Lands to some extent withered away, while the remaining are withering. A steady down pour of rain might resuscitate the Jowari, green gram and black gram crops. In the other Lands of the Taluk no Rangar (early) crops were raised. Some of the ryots who have thought their lands are eagerly looking for an early fall of rain so that they while others have not prepared their lands for want of a sufficient fall of rain. A few of the ryots have transplanted the Cattle plantations they raised in nurseries, and they are in a critical state for want of

rain, while the others have not removed from the nurseries and are awaiting rain. There is yet time till the 20th of August for sowing Cori Ragi, Cholam, Sajjai, Single Ragi. The Upasana Paddy crops below Tanks have in some places been harvested, while in a few places the standing crops are attacked by a disease called "Tatte Roga" for want of rain. The Sugar cane crops are at present in a fair Condition, but their cultivation is not carried on to any Considerable extent in the Taluk. Some of the Tanks have recently been dug up, the people have sunk wells in their beds for drinking water. There is no scarcity of fodder for Cattle, and they are said to be doing well. There is fever in a few places.

Belur Taluk.

The fall of Cambu rain was deficient, but that of Doorvarabi was fair in the Central portion. The Ragi Crop is in a good Condition. The fall of rain in the Eastern parts was also a little deficient, but in

Some places, where there was said, the rats have commenced their ravaging operations, while in others the small chilly and castor plants are in a fair condition - The paddy crops in the Mahanad portion are in a promising state. The paddy and sugar cane crops below a few localities in the Eastern part of the district are receiving irrigation, while the portion after lands, denied certain no supply of water, are withering. The crops below rivers channels are in a fair condition. The ryots are preparing their land for Rabi sowing. In places where there are neither rivers nor big tanks, some difficulty is experienced in regard to water, but wells are sunk. There is no scarcity of fodder for cattle. Public health is good.

Mallavaram.

tion, had been sent to the Amildars keeping the receipt of the Revenue order under reply, that the Amildars of two of the Talukhs have not reported the condition of their Talukhs yet.

William Chaloner

Ag. Commissioner
Northern Division

Precis of the Amildar's report on the prospects of the season &c in the Taluk of the Hewra District

Taluk Office
Mailpurabad

Wynad Paddy is extensively grown in this Amildari Taluk. Lal Ragi and Kerumi Ragi are also grown to a limited extent, the former more westward and the latter eastward. The production of other grains such as Gram, Castor &c, is insignificant and therefore calls for no particular notice.

Paddy cultivation is carried on in 2 ways, viz: (a) by transplanting plants in nurseries and transplanting them when they have grown to a small height, (b) by sowing the seed.

The Amildar reports that the transplantation process is not likely to be attended with much

Breeze, in consequence of the heavy
showers from which of a reasonable
rain fall, remained in the nurseries
rather too long. The crops raised
on fields by sowing the seeds were
withering owing to the failure of
the earlier rains. Knittike, Korini
and Mungaiid, but they are
being rejuvenated by the fall of
the Aridra rain, with which Com-
menced the monsoon. The crops
standing on marshy lands are
in a pretty good condition and
are not likely to be affected in
any material degree.

The rapi crop on lands low-
lying on the plants did not suf-
fer, as that portion of the fields
was blessed with light showers
now and then, and the crop towards
the east, which was in a critical
state, is saved by the recent Ariard rain.

Note. Since the date of this report
rain fall has been reported as follows.

	Infected	Cent.
At the 3rd fortn.	2	12.
— do — 4th — do.	2.	58.
— do 5th — do.	2.	3.
— do 6th — do	"	53.
— do 7th — do.	"	46
	7.	72

Arkalgud.

During the failure of the earlier rains-Kuttike, Korlam, Uruguru and Avidri-the field crops have greatly suffered; in some parts the plants have died out, while in others they are barely worth life. An early fall of rain might reinvigorate the standing plants, and result in a diminished outturn ranging from 4 to 8 annas crop.

Paddy is being sown on lands below river channels, but the crops under tanks have suffered from want of sufficient irrigation. An early down pour of rain might contribute to an 8 annas crop.

Narsipur.

The failure of the earlier rains

has caused the fid ragi, Karalu and Togari Crops to wither away in most parts of the Taluk, and what remains with life would be likely to yield a 2 anna crop, should there be a good fall of rain speedily. The Paddy Cultivation has yet been restored below Ranks on account of the deficient supply of water in them. Most of the tops below the river channels have risen, Paddy, and the young Crops are in a Promising State. The occupants of dry lands where fid ragi Crop failed are anxiously waiting for an early fall of rain to sow Red ragi.

Harvan.

The fid ragi, Karalu and Togari Crops raised in some parts of the Taluk have mostly withered away, and the rest are attacked by a disease called "Kumbare roga". An early shower of rain might result in a 2 anna crop.

Paddy has been sown in the
Inland Tables of Ellir, Polgo
and Chinnaraj. The crops in
Lowaying regions have been
highly affected, while those stand-
ing on a higher level have suf-
fered greater damage.

There are in the Tamil 3 rivers
Channels, but none of them have
any water flowed in them at pre-
sent. The crops below them are
not in a good condition, but they
may improve after the rivers
have received a sufficient supply
of water to irrigate the Channels.

The ryots in the Eastern part
of the Tamil, who have lost their
first ragi crop, are eagerly waiting
for a good fall of rain to enable them
to sow 2nd ragi.

Chemanoyaka.

2nd ragi is not grown to any
considerable extent in this Tamil
and more sowed this year owing

to the failure of the rains required for their growth. Varaka, Javari and Varaka have not yet been sown for failure of the Kharif rain, during which it is usual to do so. Mung (green gram) was sown in some parts, but the crop withered away. Tiny seeds are sown, but the plants in some parts have died out, and what remains would be likely to wither away unless there be an early fall of rain

To almost all the tanks re: ceived a full supply of water last year, the hardy crops below them are in a good condition and some of them have been harvested, while the others will be reaped in a fort- night or so: the outturn will be fair. The crops below the Mayi- kulam tank are not in a flourish- ing condition, as there is no water in it, but they may improve with a speedy down pour of rain

The Rod crop suffered a severe extremity in the Tank but yet does not for want of rain, and the next part of the season for doing so has passed away. It will not be too late for another month & even then, that the cultivation would be deficient.

Nagamangala.

As there was a good fall of rain in the Yelandahalli, Bellur and Nagavahalli tanks about 10 or 12 days ago, the work in those portions of the Tank Channel commenced to flow Rod crop.

The Bellur-Cauveri tank having received a full supply of water, the paddy crop under it are in very good condition. Here dear rain only in a portion of the Bindiganavale Road, and the paddy crop under the Bindiganavale tank, which at present contains a very small quantity of water, has

Ragi. Sugarcane has been extensively planted below the Kumaran tank, and the crops are said to be in a promising condition although there is not much water in the tank.

The crops of the remaining Kottis of Nagamangala, Mankali, and Basavanhalli, which have planted their lands, are anxiously looking for a good down pour of rain to bow their Ragi.

Jowari and finger crops appear to be in a critical state, but an early fall of rain might resuscitate them and contribute to a deficient outturn.

There is at present no scarcity of fodder for cattle.

Attikuppa

Owing to the absence of the earlier rain, Kaitini Rotini, Bragaseré and Heidré, the first ragi, togari Jowari, Castor, Sadapani and finger

Crops have suffered greatly. Some have
withered away, while others are in
a critical state. A heavy downpour
now might precipitate
the standing crops and result in
an entire cutting from all the
crops except kareli and tagari,
which might yield a fair produce.

The Amicus reports that the
Sugar Cane Crop Section Tail Channel
suffered from want of sufficient irri-
gation, and if hereafter the canal
a good supply of water, the cultivators
would likely have a fair crop.
Paddy (Hill Paw) and Indigenous
Crops from the Channel also suffered
and are not likely to yield anything
The crops have commenced to wither,

Kar, Paddy Section Big Tank is almost
harvested, and the cultivators satis-
factory. Sugar Cane Crops Below Small
Tanks are in a promising condition,
while those below Small Tanks have
slightly suffered for want of sufficient
irrigation. An early fall of rain
might improve them. The Black and

green grain crops. Pulse crops are withering from want of rain, and are not likely to revive even with an early fall of rain.

The vegetable land, prepared their lands for sowing, and are eagerly looking for a good fall of rain to sow the seed.

In a few parts of the Talúk there is at present difficulty experienced in regard to water for cattle, but at present there seems to be plenty of fodder for animals.

General for all Talúks.

As many of the ryots are said to have a supply of grain in store, there is at present no scarcity of fodder for cattle nor is there any difficulty experienced in regard to water for men and animals. Cattle disease is reported only from the Narsipúr Talúk.

M. Thumbleton.

General No 163 / No. } 188 —8 .

Submits a detailed report on the prospects of the season, state of crops and agricultural prospects in this District.

[illegible]

No 163.

Deputy Commissioner's Office
Mysore District
Dated Mysore 6th July 1881
Despatched 7th do —

To,
The Secretary to the Durbar
of Mysore

Sir,

I have the honor to submit the report called for in Proceedings No 2361-8/69 of 6th Instant.

2 As the ordinary routine of cultivation is so well known I shall pass over it very briefly.

3. The season is divided into the early or Kar and Later or Hyne.

4. The preparation ground for the former commences with the Vainikhasy rains (March) the earliest crop consisting Ellu (by choice) in the Nadunne and Karani followed by Ragi, Saave, Jowari, Avarai, Chillies, &c &c &c.

5. In like manner the Hyne operations may be said very generally to commence with the Margasiray rains (June) and terminate with Ragi grain in the Chittay (October) rains, though sowings of pulses (grains)

cease

cance with the Kattaray (September) and of grains (from Bhadra) with the Purattasi, Paskya (July-August) rains.

6. The spring season usually, the 1st 2d and 3d rains generally failing the 4th and 5th being generally good: the 6th, 7th and 8th almost failing the 9th or current were more general and though very deficient were beneficial for the crops but almost useless for Wynaad operations.

7. The consequent, result of the above has been that operations were as usual carried on but in most parts were considerably later in starting, but where they were early and in the more moisture, retaining & black or loamy soils such as Gudalur and parts of Gramagiri, Manjanad Begur Adevanahalli and Periyapatna a fair crop will be harvested, but where the morning showers or the soil more porous the almost failure generally, rains (i.e. several weeks) will result in very light harvest though the present drizzling rains will generally prevent a total failure.

8. The most advanced Tea Station is the S.E. of the District is now about to be harvested. Throughout the District

more

more land than usual is reported under Kar crops.

9. The Kar crop is strong on the whole short and disappointing give no occasion for anxiety.

10. The Rynee crop may be said to be non est, the, rains during, are, not been sufficient for preparation of lands and sowings. Should they hold off till the heavy rains of August the sowings of early, Avaré, Tower, Undi yields will be very scanty and the crops to be sown and harvested necessarily restricted to the pulses or grains.

11. The Taluka in Gujarat, Sanjangad Chanrajpur have a fair supply; not so in the other Talukas.

12. Rice and other kharif crops depend on the actual rain fall and the, rain alone yet to have been sufficient the, rivers are in flood, and crops from such land may be counted on.

13. To sum up the prospects are very far from what could be wished but the steps of recent good seasons

9

I believe to be large, & prices also have not risen to the extent that might have been expected & prices generally anticipated. The markets are well supplied with grain, exportation continues. & Marshall and Kirkcaldy Customs at 9/5 to 9/2 and Bags at 5 6 3/2 is being purchased and exported freely to the Baltic side. Coffee navigation from the Districts passing through seems to be increasing.

I have the honour to be,

Sir,

Your most obedient servant,

Dec 207

Agricultural Co
Bangalore, India
Dec. 15th 1881.

To

The Secretary to the Chamber
of Agriculture.

Sir,

In continuation of mine of the 29th ult. I have the honor to report that the cultivation of staple crops in this District is as follows:-

Cotton, Ground Nuts, Castor and Ragi Paddy seem, in some places, to be the chief of cultivation for want of rain.-

Ragi, Horse Gram and other dry crops.- The sowing season for these commences in June, and continues to the middle of August till the last as rain suited cultivation varies, in this year, to start to begin in the 2nd August and last till the 2nd October. But persons in this place ought at the same time to plant Castor as rain and irrigation is facilitate Groundnut

and training plantations depend, which, unfortunately, have not yet allowed this year's crop. The land yet in this year's crop. Expectations of it are running high. Should it rain entirely, cleared and high fields will at once endure. But the fields current in Seed Quarters will bear comparison (though not quite favorable) with what prevailed during the same period of last year. A copy of the report for the last fortnight is enclosed for retainer. And so, Dear Reed, not the entertainment for the present at least, but the picture of hope and that future of hope.

Cane, &c. The season for sowing these commences in September, but should the land fail now, it would be advisable speculate about the after crop, which are secondary.

Sugar Cane, planted about February last seems to be thriving generally.

2. On the whole, the most favorable time for sowing the staple grain is last

Pursuance thereof. The Sheriff of the County

ಕಾಲಮಾನ ಮತ್ತು ಸಮಯ

ಕಾಲಮಾನ ಎಂದರೆ ಒಂದು ಸ್ಥಳದಲ್ಲಿ ಸೂರ್ಯನು ಮೂಡಣ ದಿಕ್ಕಿನಲ್ಲಿ ಕಾಣಿಸಿಕೊಂಡಾಗಿನಿಂದ ಮರುದಿನ ಮೂಡಣ ದಿಕ್ಕಿನಲ್ಲಿ ಕಾಣಿಸಿಕೊಳ್ಳುವವರೆಗಿನ ಅವಧಿ. ಇದನ್ನು ಸೌರ ದಿನ ಎಂದು ಕರೆಯುತ್ತಾರೆ. ಒಂದು ಸೌರ ದಿನವು ೨೪ ಗಂಟೆಗಳಿಗೆ ಸಮ. ಒಂದು ಗಂಟೆಯು ೬೦ ನಿಮಿಷಗಳಿಗೆ ಸಮ. ಒಂದು ನಿಮಿಷವು ೬೦ ಸೆಕೆಂಡುಗಳಿಗೆ ಸಮ.

ಸಮಯ ಎಂದರೆ ಒಂದು ಕ್ಷಣದಲ್ಲಿ ಗಡಿಯಾರದಲ್ಲಿ ಕಾಣಿಸುವ ಗಂಟೆ, ನಿಮಿಷ ಮತ್ತು ಸೆಕೆಂಡುಗಳ ಸಂಖ್ಯೆಗಳು. ಉದಾಹರಣೆಗೆ, ಬೆಳಿಗ್ಗೆ ೭ ಗಂಟೆ ೩೦ ನಿಮಿಷ ಎಂದರೆ ಸೂರ್ಯೋದಯವಾಗಿ ೭ ಗಂಟೆ ೩೦ ನಿಮಿಷಗಳು ಕಳೆದಿವೆ ಎಂದರ್ಥ.

ಕಾಲಮಾನವನ್ನು ಅಳೆಯಲು ಗಡಿಯಾರವನ್ನು ಬಳಸಲಾಗುತ್ತದೆ. ಗಡಿಯಾರದಲ್ಲಿ ಮೂರು ಮುಳ್ಳುಗಳಿರುತ್ತವೆ. ಚಿಕ್ಕ ಮುಳ್ಳು ಗಂಟೆಯನ್ನು, ಮಧ್ಯದ ಮುಳ್ಳು ನಿಮಿಷವನ್ನು, ಉದ್ದ ಮುಳ್ಳು ಸೆಕೆಂಡುಗಳನ್ನು ತೋರಿಸುತ್ತವೆ.

ಪ್ರಶ್ನೆಗಳು

೧. ಒಂದು ಸೌರ ದಿನವು ಎಷ್ಟು ಗಂಟೆಗಳಿಗೆ ಸಮ?

೨. ಒಂದು ಗಂಟೆಯಲ್ಲಿ ಎಷ್ಟು ನಿಮಿಷಗಳಿವೆ?

೩. ಒಂದು ನಿಮಿಷದಲ್ಲಿ ಎಷ್ಟು ಸೆಕೆಂಡುಗಳಿವೆ?

೪. ಗಡಿಯಾರದಲ್ಲಿ ಎಷ್ಟು ಮುಳ್ಳುಗಳಿರುತ್ತವೆ?

೫. ಚಿಕ್ಕ ಮುಳ್ಳು ಯಾವುದನ್ನು ತೋರಿಸುತ್ತದೆ?

ಚಟುವಟಿಕೆ

ನಿಮ್ಮ ಮನೆಯಲ್ಲಿರುವ ಗಡಿಯಾರವನ್ನು ನೋಡಿ ಮೂರು ಮುಳ್ಳುಗಳನ್ನು ಗುರುತಿಸಿ. ಪ್ರತಿಯೊಂದು ಮುಳ್ಳು ಏನನ್ನು ತೋರಿಸುತ್ತದೆ ಎಂಬುದನ್ನು ಬರೆಯಿರಿ.

ಕಾಲಿಗೆ ಬಿದ್ದು ಕೆಲಸ ಕೇಳಿಕೊಂಡ ಮೇಲೆ ಅವನಿಗೆ ಕೆಲಸ ಕೊಡಲೇಬೇಕಾಯಿತು. ಅವನು ಕೆಲಸ ಮಾಡಲು ಪ್ರಾರಂಭಿಸಿದ. ಅವನ ಕೆಲಸ ಕಂಡು ಅವನ ಯಜಮಾನನಿಗೆ ಆಶ್ಚರ್ಯವಾಯಿತು. ಅವನು ಮಾಡಿದ ಕೆಲಸ ಅಷ್ಟು ಚೆನ್ನಾಗಿತ್ತು. ಅವನ ಯಜಮಾನನು ಅವನಿಗೆ ಹೆಚ್ಚು ಸಂಬಳ ಕೊಟ್ಟನು. ಅವನು ಸಂಬಳವನ್ನು ತೆಗೆದುಕೊಂಡು ಹೋಗಿ ಅಂಗಡಿಯಲ್ಲಿ ಸಾಮಾನು ಕೊಂಡು ತಂದು ಮಾರಲು ಪ್ರಾರಂಭಿಸಿದ. ಅವನಿಗೆ ಲಾಭ ಬಂದಿತು. ಅವನು ಮತ್ತೆ ಸಾಮಾನು ಕೊಂಡು ತಂದು ಮಾರಿದ. ಅವನಿಗೆ ಮತ್ತೆ ಲಾಭ ಬಂದಿತು. ಅವನು ಹೀಗೆ ಸಾಮಾನು ಕೊಂಡು ತಂದು ಮಾರಿ ಲಾಭ ಗಳಿಸುತ್ತಾ ಬಂದ. ಅವನಿಗೆ ಸಾಕಷ್ಟು ಹಣ ಸಂಪಾದನೆಯಾಯಿತು. ಅವನು ಒಂದು ಅಂಗಡಿಯನ್ನು ಇಟ್ಟುಕೊಂಡ. ಅವನು ಅಂಗಡಿಯಲ್ಲಿ ಕುಳಿತು ವ್ಯಾಪಾರ ಮಾಡಲು ಪ್ರಾರಂಭಿಸಿದ. ಅವನಿಗೆ ಹೆಚ್ಚು ಲಾಭ ಬರಲಾರಂಭಿಸಿತು. ಅವನು ಹಣವಂತನಾದ. ಅವನು ಒಂದು ಮನೆಯನ್ನು ಕಟ್ಟಿಸಿದ. ಅವನು ಮದುವೆಯಾದ. ಅವನಿಗೆ ಮಕ್ಕಳಾದವು. ಅವನು ಸುಖವಾಗಿ ಜೀವಿಸಿದ.

ಪಾಠ – ೨

१. दी गई संज्ञाओं के लिंग पहचानिए और उनके विपरीत लिंग लिखिए —

संज्ञा	लिंग	विपरीत लिंग
राजा	पुल्लिंग	रानी
गाय	स्त्रीलिंग	बैल
घोड़ा	पुल्लिंग	घोड़ी
बहन	स्त्रीलिंग	भाई
शेर	पुल्लिंग	शेरनी
माता	स्त्रीलिंग	पिता
हंस	पुल्लिंग	हंसिनी
बकरी	स्त्रीलिंग	बकरा

२. रिक्त स्थान में उचित शब्द भरिए —

(क) सूरज पूर्व दिशा में उगता है।

(ख) पक्षी आकाश में उड़ते हैं।

(ग) मछली पानी में तैरती है।

(घ) बच्चे विद्यालय में पढ़ते हैं।

(ङ) किसान खेत में हल चलाता है।

(च) चिड़िया घोंसले में अंडे देती है।

(छ) नदी का जल मीठा होता है।

(ज) सूर्य पश्चिम दिशा में अस्त होता है।

३. निम्नलिखित वाक्यों को शुद्ध कीजिए —

(क) वह जाता है। → वह विद्यालय जाता है।

(ख) मैं खाना। → मैं खाना खाता हूँ।

(ग) पक्षी उड़ते। → पक्षी आकाश में उड़ते हैं।

(घ) राम पढ़ता। → राम पुस्तक पढ़ता है।

(ङ) गाय दूध। → गाय दूध देती है।

४. अपने शब्दों में उत्तर दीजिए —

(क) पक्षी उड़ने के लिए पंखों का उपयोग क्यों करते हैं?

पक्षी उड़ने के लिए पंखों का उपयोग करते हैं क्योंकि पंखों की सहायता से वे हवा में ऊपर उठ सकते हैं और आगे बढ़ सकते हैं। पंख हवा को नीचे की ओर धकेलते हैं जिससे पक्षी को ऊपर की ओर बल मिलता है।

(ख) मछली पानी में कैसे साँस लेती है?

मछली पानी में अपने गलफड़ों से साँस लेती है। गलफड़े पानी में घुली हुई ऑक्सीजन को अवशोषित करते हैं और शरीर से बाहर निकालते हैं।

(ग) हमें पक्षियों की रक्षा क्यों करनी चाहिए?

हमें पक्षियों की रक्षा करनी चाहिए क्योंकि वे पर्यावरण के महत्वपूर्ण अंग हैं। वे कीड़ों को खाकर फसलों की रक्षा करते हैं और बीजों को फैलाकर वनों को उगाने में सहायता करते हैं।

५. सही विकल्प चुनिए —

(क) सूर्य किस दिशा में अस्त होता है? — (i) पूर्व (ii) पश्चिम (iii) उत्तर (iv) दक्षिण — उत्तर: (ii) पश्चिम

(ख) मछली पानी में साँस लेने के लिए किसका उपयोग करती है? — (i) फेफड़ों (ii) गलफड़ों (iii) त्वचा (iv) नाक — उत्तर: (ii) गलफड़ों

(ग) पक्षी उड़ने के लिए क्या उपयोग करते हैं? — (i) पैर (ii) पंख (iii) चोंच (iv) पूँछ — उत्तर: (ii) पंख

(घ) 'बकरी' का विपरीत लिंग शब्द क्या है? — (i) बकरा (ii) गाय (iii) घोड़ी (iv) हंसिनी — उत्तर: (i) बकरा

(ङ) 'हंस' का स्त्रीलिंग रूप क्या है? — (i) हंसी (ii) हंसिनी (iii) हंसनी (iv) हंसा — उत्तर: (ii) हंसिनी

६. अपने शब्दों में उत्तर दीजिए —

(क) पक्षी उड़ने के लिए पंखों का उपयोग क्यों करते हैं?

पक्षी उड़ने के लिए पंखों का उपयोग करते हैं क्योंकि पंखों की सहायता से वे हवा में ऊपर उठ सकते हैं और आगे बढ़ सकते हैं। पंख हवा को नीचे की ओर धकेलते हैं जिससे पक्षी को ऊपर की ओर बल मिलता है।

(ख) मछली पानी में कैसे साँस लेती है?

मछली पानी में अपने गलफड़ों से साँस लेती है। गलफड़े पानी में घुली हुई ऑक्सीजन को अवशोषित करते हैं और शरीर से बाहर निकालते हैं।

(ग) हमें पक्षियों की रक्षा क्यों करनी चाहिए?

हमें पक्षियों की रक्षा करनी चाहिए क्योंकि वे पर्यावरण के महत्वपूर्ण अंग हैं। वे कीड़ों को खाकर फसलों की रक्षा करते हैं और बीजों को फैलाकर वनों को उगाने में सहायता करते हैं।

७. सही विकल्प चुनिए —

(क) सूर्य किस दिशा में अस्त होता है? — (i) पूर्व (ii) पश्चिम (iii) उत्तर (iv) दक्षिण — उत्तर: (ii) पश्चिम

(ख) मछली पानी में साँस लेने के लिए किसका उपयोग करती है? — (i) फेफड़ों (ii) गलफड़ों (iii) त्वचा (iv) नाक — उत्तर: (ii) गलफड़ों

(ग) पक्षी उड़ने के लिए क्या उपयोग करते हैं? — (i) पैर (ii) पंख (iii) चोंच (iv) पूँछ — उत्तर: (ii) पंख

(घ) 'बकरी' का विपरीत लिंग शब्द क्या है? — (i) बकरा (ii) गाय (iii) घोड़ी (iv) हंसिनी — उत्तर: (i) बकरा

(ङ) 'हंस' का स्त्रीलिंग रूप क्या है? — (i) हंसी (ii) हंसिनी (iii) हंसनी (iv) हंसा — उत्तर: (ii) हंसिनी

ನಮ್ಮ ಶಾಲೆ

ನಮ್ಮ ಶಾಲೆಯ ಹೆಸರು ಸರಕಾರಿ ಪ್ರಾಥಮಿಕ ಶಾಲೆ, ಕೆರೆಕೋಡಿ. ಇದು ಊರಿನ ಮಧ್ಯದಲ್ಲಿದೆ. ಶಾಲೆಯಲ್ಲಿ ಒಟ್ಟು ಮೂರು ಕೊಠಡಿಗಳಿವೆ. ಒಂದು ಕೊಠಡಿಯಲ್ಲಿ ಒಂದು ಮತ್ತು ಎರಡನೇ ತರಗತಿಯವರು ಕುಳಿತುಕೊಳ್ಳುತ್ತಾರೆ. ಎರಡನೇ ಕೊಠಡಿಯಲ್ಲಿ ಮೂರು ಮತ್ತು ನಾಲ್ಕನೇ ತರಗತಿಯವರು ಕುಳಿತುಕೊಳ್ಳುತ್ತಾರೆ. ಮೂರನೇ ಕೊಠಡಿಯಲ್ಲಿ ಐದನೇ ತರಗತಿಯವರು ಕುಳಿತುಕೊಳ್ಳುತ್ತಾರೆ.

ಶಾಲೆಯಲ್ಲಿ ಒಟ್ಟು ಮೂರು ಜನ ಶಿಕ್ಷಕರಿದ್ದಾರೆ. ಅವರಲ್ಲಿ ಒಬ್ಬರು ಮುಖ್ಯೋಪಾಧ್ಯಾಯರು. ಅವರು ಪ್ರತಿದಿನ ಬೆಳಿಗ್ಗೆ ಬೇಗ ಬಂದು ಪ್ರಾರ್ಥನೆ ಮಾಡಿಸುತ್ತಾರೆ. ಶಿಕ್ಷಕರು ನಮಗೆ ಚೆನ್ನಾಗಿ ಪಾಠ ಹೇಳಿಕೊಡುತ್ತಾರೆ. ತಪ್ಪು ಮಾಡಿದಾಗ ಬುದ್ಧಿ ಹೇಳುತ್ತಾರೆ.

ಶಾಲೆಯ ಮುಂದೆ ಒಂದು ದೊಡ್ಡ ಆಟದ ಮೈದಾನವಿದೆ. ಅಲ್ಲಿ ನಾವು ಕ್ರಿಕೆಟ್, ಕಬಡ್ಡಿ, ಖೋ-ಖೋ ಆಡುತ್ತೇವೆ. ಶಾಲೆಯಲ್ಲಿ ಒಂದು ಚಿಕ್ಕ ಗ್ರಂಥಾಲಯವೂ ಇದೆ. ಅಲ್ಲಿ ಅನೇಕ ಕಥೆ ಪುಸ್ತಕಗಳಿವೆ. ನಾನು ಪ್ರತಿವಾರ ಒಂದು ಪುಸ್ತಕ ತೆಗೆದುಕೊಂಡು ಹೋಗಿ ಓದಿ ಹಿಂತಿರುಗಿಸುತ್ತೇನೆ.

ಅ) ಶಾಲೆಯ ಹೆಸರೇನು?

ಆ) ಶಾಲೆಯಲ್ಲಿ ಒಟ್ಟು ಎಷ್ಟು ಕೊಠಡಿಗಳಿವೆ?

ಇ) ಮೂರನೇ ಕೊಠಡಿಯಲ್ಲಿ ಯಾರು ಕುಳಿತುಕೊಳ್ಳುತ್ತಾರೆ?

ಈ) ಶಾಲೆಯಲ್ಲಿ ಒಟ್ಟು ಎಷ್ಟು ಜನ ಶಿಕ್ಷಕರಿದ್ದಾರೆ?

ಉ) ಶಾಲೆಯ ಮುಂದೆ ಏನಿದೆ?

ಊ) ಶಾಲೆಯಲ್ಲಿ ಗ್ರಂಥಾಲಯವಿದೆಯೇ?

ಋ) ನಾನು ಪ್ರತಿವಾರ ಏನು ಮಾಡುತ್ತೇನೆ?

೮. ಕೆಳಗಿನ ಪದಗಳಿಗೆ ಅರ್ಥ ಬರೆಯಿರಿ. ೫

ಅ) ಪುಸ್ತಕ – _____

ಆ) ಶಾಲೆ – _____

ಇ) ಆಟ – _____

ಈ) ಪಾಠ – _____

ಉ) ಸ್ನೇಹಿತ – _____

೯. ಕೆಳಗಿನ ಪದಗಳಿಗೆ ಬಹುವಚನ ರೂಪ ಬರೆಯಿರಿ. ೫

ಅ) ಹುಡುಗ – _____

ಆ) ಹುಡುಗಿ – _____

ಇ) ಪುಸ್ತಕ – _____

ಈ) ಮರ – _____

ಉ) ಹಕ್ಕಿ – _____

೧೦. ಕೆಳಗಿನ ಪ್ರಶ್ನೆಗಳಿಗೆ ಉತ್ತರಿಸಿ. ೫

Sesamum oil-seed, Blackgram, Greengram plants should have been in blossom now. Safari plants should have been a foot and a half high. Ragi, Varagu and Sajjai plants should have been from 3 to 4 foot high in the Kaidan parts. In the Kalkad parts, the sowing of these should have been completed.

of the rain does not fail hereafter, Safai cane will yield a 10 acres crop, taking it as full crop, Paddy, Safari and Ragi and the other pulses sown along with it about 5 acres.

The sowing should have been completed throughout the taluk. Greengram, Wheat, Bengal, Sesamum oil, Blackgram and Coriander plants should have attained about 1/8th of their growth, Horsegram, Ragi and Varagi and Cholam 1/16th.

If good rain comes down within the end of July, Ragi, Safari and other dry crops can be sown and reaped with pretty fair result. Except oil seeds for Wheat, Bengal, Greengram and Coriander seem to be almost free.

Statement regarding the prospects of the Crops in the Chittagong District for the year 1882

Sugar Cane

Sugar Cane plant are looking 3/4 of good. Irrigation of rain in June last cannot time is water in time places but it of subsequent good rains last month.

Paddy

1/3rd crop Paddy fields were done in June and the plants are grow, it's water-logged may were beginning to water, but the July rain has saved their growth - and has washed the young crop remaining 2/3 of them - 3/4 crop having not been completed and remaining 1/4 will be finished within a week, for which the heavy rain in the month was very much required. Although many of a little damage to the crop by the rains in October first but the crop is expected to be good.

Rape

The last only 1/8 crop Rape seed have been done, as other crops are expected in Spring Crop. But in this District the season for sowing Rape and mill crop may be varied.

Jowari

Jowari has been done, and it is expected to a small extent that it will yield good crop.

The tanks are in average condition and supply sufficient water for irrigation in the ensuing rains.

Prospects - good.

Eastern Districts

29.7.87

Precis of the Standard Reports on the prospects of the season &c. in the Districts of the Karnam Sub-Collectorate for the 2nd fortnight of Feb. 1951.

Tadpatri 9/10

Mayavaram

The recent rain has done some good to the Cudda and Ragi crops but a Mahanad Calculation this requires a heavier fall of rain. Transplantation of paddy is going on. The Coffee plantations are in a fair condition. Public health is good, and there is no want felt in regard to water or fodder for cattle.

Narasipur.

The earlier crops viz. Ragi, Redgram and Jowari withered away in the Karka, Nidavasi and Mavinkere Hoblies. The same crops have greatly suffered in the Gauribidanur and Madagiri Hoblies, but the Ragi crops standing in the sides of Channels or lands bordering water, river and in sandy soil

are badly with lice, and might
perhaps be resuscitated by an
early shower of rain, but
the outturn would be very de-
ficient. Rice crop, planted
below tanks to an insignificant
extent, is in a fair condition.
Similar crops below river
channels are in a promising
state. Ragi crops are anxiously
waiting for good rain to sow Cool
crops. Public health is good. There
is at present no scarcity of water
or fodder for animals. Murrain
is reported to be on the decrease.

Harkan.

The Ragi Karala and Togari
crops in the Inland Taluks of the
District are withering and require
a speedy fall of rain to resuscitate
them. In the Inland taluks the
Jowar crops standing on marshy
ground are doing tolerably well,
but those on the higher land are
withering. Tanks have received
no water. The lands below river

channels are being declared for paddy and canals that have formed nurseries for plants. The paddy plants below canals and Kabés are about a quarter foot in height, but the canals do not contain a sufficient supply of water. The crops below certain big canals have formed nurseries for paddy plants. They are eagerly looking a good fall of rain to see that rapid scarcity of fodder for animals is beginning to be felt in a few parts of the Island, as the supply in store is diminishing. Difficulty is experienced in a few villages in regard to drinking water. Public health is quite what good, but there is small pox amongst children.

Chemaroyphatna.

Owing to the absence of rain, the Chilly and cotton plants are withering. Paddy below tanks in some places being cultivated in others the crops have come into bearing, but the entire Province Cutcherry is not likely to

satisfactory for want of rain. The Sugar Cane crops require rain. Red ragi has not as yet been sown any where in the Taluk, and the season for sowing it is passing. Public health is good, but difficulty is experienced in a few places in regard to drinking water, and there is also a scarcity of fodder for Animals.

Belur.

There has recently been no sufficient fall of rain. Red ragi in the inland portions of the Taluk is in a fair condition, but towards the east no cultivation has yet commenced for want of rain. The Garden and Coffee plants are withering, but Sugar Cane below Banks is in a fair condition. The Coffee plants in the inland are dying but since the fall of the Hirisi and Punarvasu rains. Tanks have received no supply of water. Paddy

and Sugar Cane below big tanks
in the eastern part of the Taluk
are receiving irrigation from them,
while the crops below other tanks
which have no sufficient supply
of water are withering. The crops
below river channels are not
in a bad condition, but they
require rain. There is a difficulty
felt in regard to drinking water
in places which are not favored
with river channels or big tanks,
and wells have been sunk in
such places. No scarcity of fodder
is at present felt.

Harihalli.

The earlier (Mungar) Crops,
such as green gram, black gram,
Horsegram, Jowari, Coriander
and fid ragi were raised with
Kidenkere, Karmaaka and
Gundasthi Habbis, but in the last
named Taluk they withered away
for want of rain, while in the other
two the standing Jowari, green gram
and black gram Crops were benefi

by a recent fall of rain. In the remaining Hoblis of the Taluk no "Kumyar" Crop was raised, owing to the absence of rain. Paddy fallow tanks in the Kitlen. Kere, Kerawanka, Arsikere, Gandasi and Kallinjadi Hoblies is in a pretty good condition, but the crops are here and there attacked by a disease known as "Tabi roga". The tanks contain a supply of water sufficient to last for another month. The Kyar Cane Crop, raised to a limited extent in the Gandasi and Kallinjadi Hoblies, is not in a very promising state owing to the want of an adequate supply of water in the Tanks on which it depends. Red ragi has not yet been sown in any part of the Taluk for want of rain. The Castor plants have died out, but the ragi to have again sown

Ked

Nurseries for Chilly Kharif scarcity of fodder for cattle is felt in a few places. Cattle diseases called "Mettrikat and Chapke" have appeared in a few parts of the Gandaki Hobli; while in the rest of the Taluk the cattle are healthy. Fever and Cough are prevalent in some places. In villages where there are no big tanks, difficulty is experienced in regard to drinking water.

To

R. Vijayendra Rao. Esq.
Secretary to the
Dewan of Mysore

Sir,

With reference to the 3rd para of the Proceedings of the Dewan, No. 1780-92 dated 27th Instant, I have the honor to state for personal communication with the Executive Engineer Mr. Bayly, I am of opinion that it will be very desirable to have the entire line of Railway from Bangalore to Tumkur, laid out at once. The marking out will probably be only done at the rate of 1 or 2 miles a day & for 1 Engineer, so that if we all

Despatch Mr Crowder, who authorized
[illegible] before actual
work can be commenced, and
until the prospects of finance,
trade & the Public Revenue admit
to otherwise until People
begin to get reconciled to recruiting
cautiously start.

II. Copies of all correspondence
which it is submitted should
be placed in the hands of the
Press as soon as possible, & every reasonable
Action generally that there
remains on the part of the
Executive Government to be
taken, otherwise, or by
Proclamation with the necessary
Powers. The Army Corps of
Canada Regiments certain of Granted
in Militia Act throughout the
Dominion, Enrolling of Students
in various Universities, Militia Corps attached
to Active Steady and Continuous

all over the District, with the advantage that they will be working near their homes, and be able to return to them at night.

III. I have also the Railway feeder from Kamkamully to Cooper. I refer to Chapter Chamapatna to Kamkally and from Odda Ballapur to Nelamangala which could be worked economically by village local labor, as distinct from Widders

IV. As regards certain matters dealt in the proceedings under acknowledgment, a reply will be sent after receiving from the Auditor, answers to certain queries now being put to them.

I have the honor to be
Sir
Your most obd't Servant

1.8.81

Precis of the Amildar's report on the condition of the seasons &c in the Akalgid, Ahiriapa, and Chapra Talukas during the 2nd fort. 1881.

Akalgid.

The recent fall of the Punarvasu rain has slightly benefited the Kid kept, Paddy, Bottar Jagri, Cotton, Garden, (Castor) Chilly, and Vegetables crops in the Kacha, Peccatta, Malajatta, Domatjas, and Gour. Satisfactory the remaining talukas not having as yet been blessed with any rain, the dry crops in those portions of the Taluk are withering. In most places, Paddy cultivation has not as yet been ventured upon, tanks for want of water in them, and the plants raised in a few places during the earlier part of the year are in a critical state for want of sufficient irrigation. The ryots are engaged in transplanting Paddy upon river channels, and some of them have completed the process. Public health

is good, and there is no scarcity
fair pasturage for fodder for cattle.

Rabi.

Owing to the absence of rain the
dry crops, viz. ragi, green gram,
togari, jowari, castor, Cudapani
and horsegram crops are all in a
bad condition. The sugar cane crop
below river channels having recently
received irrigation, the outturn
is likely to be a fair one. The
ryots have commenced sowing
paddy. Paddy below big tanks is
being cut and the sugar cane crops
under them are in a fair condition.
The black and green gram crops have
withered away for want of rain. The
sugar cane crop below small tanks
require irrigation. The ryots are
anxiously looking for rain to com-
mence ragi. In a few places the seeds
which they had sown did not shoot
out for want of rain. The villages
which are not favored with big
tanks or river channels, there is some
difficulty experienced in regard to
drinking water. There is a large

no scarcity for fodder as the supply in store is said to last for another month or two. Public health good.

Nagamangala.

Owing to the absence of rain the Ragi crops, Jowari, Gorka and Seasamum are withering. The ryots are looking for rain to sow Red ragi. The Sugar cane and paddy crops likewise. Dry lands are at present in a precarious condition, but the supply of water in the tanks, with that of Bellur, is very sufficient. Public health is good, but there is a difficulty felt in many places in regard to drinking water. The supply of fodder in store is fair. Cattle

Native Affairs
Department
Chickanagan 2 Sept. 83

To

The Secretary to the Department

Sir

I have the honor to submit the following Report for the Season 1883 dated 2nd July 1881.

Detailed account of the state of the season.

2. The first rain we had in the District this year, was in the latter end of March, and beginning of April when a considerable shower fell in the Inland.

(There were great benefits to the Agriculturists bringing out abundance of Cattle, if that calculation an important one in this District, is safe.)

3. In May we had again some rain and the little Red Rags, which is sown in this Valley was then just sown & planting operations were commenced everywhere.

4. In June the rain left off. There were a few showers in Chilkanagan, which kept the Red Rags from withering, and from a 6 to an 8 acres crop Rags will be obtained from it. This rain however was not sufficient in the Remainder of Farming Districts to enable the Agents

o more than plough.

In July Jowar in fields three days' journey from Kotgiri, and Jowar in Kuttanalli and the five crops in three Tot Cotta were planted and are doing well.

6. In the Villages of Nortiem portions of the Panniere Magganie of the Sattiere Taluk, Pommeran also of all the Eyots in many instances have Cattle drawn.

7 In the rest of the Sattiere Sub Crick in almost the whole of the Bassavar Sub Crick and the Ladde, Seegapalam, Chickmanlu and Khalasapur Maganies of the Chikmagalur Taluk, there have no Rain to speak of. No 2nd Raggi have been sown, & Jowar have begun to fail for want.

8 In the very end of June I went round & inspected some of the Ryots Farms of the District near, but Commencing another inspection of Tour. I have talked very freely with the Villagers about their prospects, taking care of course not to alarm them, & generally they are not so hungry as one might expect. The

with the Rise of prices. Of course Short of
how they still cling to the hope that it
will Rain, the Season will have Rained
Later good from Abstinence.

9 If Table is attached, showing the
Rain fall for the last five years in this
District also Different Calculi Read by
Quarter & the Rain fall this year.

10. It will be seen that Even in the
famine year of 1874/77, the Rain fall
left to the end of January at Ramnad has D. 1 C.
this year also been 5—31. At Sivaganga
it was in 1876 S. C. 13—11 D. 4 C. & this
year it has only been 1 1/4 - 29 - At Paramagudi
in 1876/77 it was 15—57. This year upto 22
August it has only been D. 10 C. —30—.

Effect of grain Stock. 11 This is most difficult to Estimate,
but I think that owing to the favourable
harvest of last year, wages to have come
in to rise from six per cent to a year &
Supply of Cash. In the meantime many

Works
Roads

16. Such part of the ground
much felt-like as the animals can
I will cause to be secured at the proper
open of the Pastures allotted for
to the Public Cattle- the permission
to allow Cattle from Madras to graze on
the high ground above the Aqueduct &
below the Head of Tanks be confined
to the Cattle employed at the

Pastures

17. The Accompanying is a Map showing the portions of the Districts which are liable to suffer Famine.

Remarks 18. There are Stocks of Grain in the Districts sufficient for its Consumption for at least a Year. Of the Loans on Land-Revenue Securities the Proportion of Collections is very small. The people depend to meet their Engagements, here forced to sell their Grain on its being harvested for what they can get, to their Creditors Magistrates. These Natives will not Scruple sending their Stores to Places where the Crops are deficient, & we cannot calculate Confidently on the Grain now in Store being sufficient for our Wants, while Prices have already risen from 7 Seers to 28 Seers per Rupee here.

19. Every Endeavour will be made to anticipate Payment of Rates and if Remission is accorded to any Sufferers it will be allowed when needed before Demoralization sets in, Anything like Famine with its Horrors will be avoided

for this reason

it is desired that this report should

be filed in duplicate, that one may remain

there in the custody of the Secretary of State

and that the other may be sent to the

Secretary of War, to whom all letters

shall be addressed, which are

all letters from the Board.

I have the honor to be

Despatched August

Received

Enclosures No. one

General No. 347 } 1887—82.

In Submitting the accompanying Report on the Season and condition of the Salaks in this District for 3rd quarter, 1887, I have the honour to State that Prospects have improved, as rain has fallen more or less in the several Salaks of the District since the receipt of the Amildars reports.

I have the honour

Sir

Your most obedient

Bangalore

8-8-87

Deputy Commissioner

1358

Season Report of the General Farms in the Kaira District up to 31st July 87.

— " —

Kaira Sudr. Bdl 10

The standing crops in the Nadiad talukas of the Farms are suffering from want of rain, while those in the Mahmad are estimated to be 2 to 3 annas crops. Lands below channels are being prepared for paddy cultivation, and in some places nurseries have been formed both under channels and certain lands. The paddy seedlings below lands and Kathes are about 8 inches high, but there is not a sufficient supply of water for them. General lands are either dry or are drying up. Cotton, juar, bajri and chilly have been sown in some places, and in other parts lands are being prepared in expectation of rain. There is no lack of fodder and water in the Mahmad taluka of the Farms.

but in the Maidan tanks are
scarce and the inhabitants of
some villages obtain water from
wells in neighbouring villages. The
public health is good, except that
small pox prevails among children,
and murrain among cattle in
certain localities.

—"—

Belúr.

Owing to the want of rain there
has been no cultivation. The seeds
previously sown in one or two
villages germinated, but the seed-
lings are not thriving. The work
of transplanting paddy is retarded,
and the seedlings in nurseries are
withering. Paddy and sugar cane
crops in certain tanks are also in a
backward condition in consequence
of insufficient irrigation, there being
but a small supply of water in the
tanks. Cattle disease has come
into existence suffering. Rain

and to Lower dod, raising [illegible] other
seed. The "Pinnamaca" rain has
failed altogether, and the river
has gone down to such an extent
that it cannot fully supply water
to channels. People have built mud
dikes in places where there is a scarcity
of water for themselves and their
cattle. There is not much pasturage
for cattle in Mainad tract, and
straw is being used in the Maidan.
Prices are rising, and rice is being
largely exported daily. Rice was
sold at 11 and 12 seers per rupee
at the last market day at Sibi.
The public health is indifferent,
and the loss among cattle from
Rinderpest (Rod zoga) is heavy.

— " —

Manjarabad.

Transplanting of paddy continues
in low-lying fields, but the plants
growing on high lands are too old
to be transplanted, and a heavy
loss on this account will, it is
reported, be the result. The paddy

crop generally is failing from want of rain since last report to date, and there are no large tanks from which it can receive adequate irrigation. The crop is also suffering from a disease called 'Kattè roga', and is being destroyed from the ravages of insect pests, news of which have been forwarded to the Dewan for inspection. The transplanting of rabi cannot be undertaken in the absence of rain. Coffee plantations are doing fairly well. Fever prevails in parts of the Taluk, but the public health is good on the whole. Cattle are also healthy, and there is no want of pasturage or water for them.

—"—

Arkalgúd

There has been no rain since last report. The Kaveri and Hemavati rivers have gone down so much that they are fordable in some parts,

favorable in a couple of days hence,
the day crops in the fine Fruland
Fables of the Tarai benefitted by
the rain (some) which fell recently
and are in fair condition, but
those in the Maidan Tables are
not thriving from want of rain.
The paddy crop is also withering,
and transplanting is at a stand
still from the same cause. Cauliflow-
channels have been sown. Prices
are rising daily, and on the 29th
inferior rice was sold at seven
seers per rupee and wheat from 8 to
12 seers. The health of the Tarai is
indifferent. There is grass to a
certain extent for cattle in the
Maidan Tables, but this is not
the case in the Maidan, and cattle
are consequently suffering in this
respect, especially those belonging
to Nepalese who have no clear in store

—"—

Narsighur

A bright clear sky and no rain

have been the characteristic of
the weather in this Taluk except
Agraharam and other places in the
Gummi Kabbi where about half
"Kuda" of rain fell on the evening
of the 30th, advantage of which was
taken by the ryots for sowing dry
Ragi in fields which had previ-
ously been prepared for the
purpose. The early crops, such
as Gid Ragi, Maize, Verumum,
have shot out and the prospects
of any cultivation generally
being discouraging the ryots
are particular in their attention
to wet Cultivation. The Paddy
and Byar Cane Crops however
under tanks are not drought
from want of sufficient irrigation,
and the Paddy Crop under Cha-
nels is attacked by a disease
called "Kabbi Kai roga" and is
being damaged by it, while
the Byar Cane is in good Condition.
No difficulty is experienced for

water nor for grazing cattle
in those parts which Mr. Ricketts
Channels, but in other places
where there is no such drawback
is being supplied to them. The
public health is fair.

—"—

Chemanoprated

Owing to the absence of the
usual seasonable rains, no
sid, ragi near soon this year
and the veranum and Cholly
Crops which were raised
withered away in some parts,
while in other places they are
in a very poor condition. Bai-
sakha Paddy is being harvested
and is estimated to be an 8
anna Crop. Sugar Cane is not
thriving very well for want
of sufficient water. Rain fell
in the Mysikatti, Kapur, Hirisave
Mallé and Didga Hobli, and
was sufficiently heavy to ad-
mit of the ploughing of lands

being Commenced. More rain is however needed and is anxiously looked for as sowing and to further agricultural operations generally. Scarcity of drinking water is felt in several villages and there is scarcely any fodder for cattle. The public health is middling.

Abikuppa

The failure of the South West rain (Purattasi) resulted in the loss of some of the early crops of Red ragi (Kezhvaragu) Cholam (Maize) Cumbu (Bajra) Tadapayir (Kambu) Black and Green gram and Horsegram (Kollu) and in the poorness of the condition of the surviving ones as well as of the Navarai crop. Paddy has been sown but channels and nurseries have been formed - The harvesting of the Vaikasi Paddy crop

Crafs below Channels and
big tanks are drying fast
those under small tanks are not.
Ryots are anxiously awaiting for
a good fall of rain to re-sow
cod ragi, as the seed sown did
not germinate for want of
moisture. Handlift is ex-
perienced for drinking water
both for people and cattle in
places where there are no rivers,
channels, large tanks and
ponds, and where Kabés are
empty, and in such localities
wells have been dug. Fodder
is scarce in some parts of the Taluk
and its want is felt especially
by those whose stock of straw
is consumed. The Taluk is healthy.

— 4 —

Nagamangala

Rain fell at Taluk Head Quarters
on the afternoon of the 30th, but
was too slight for cultivation
purposes, the quantity gauged

being only 25 Cents. The Bazar Crops, viz: Cocoanuts, Maize, Varka &c. are flourishing and will die entirely altogether unless saved by timely rain, of which there is every indication, as the weather is cloudy. Rain is also awaited for the sowing of dal, rapi. The paddy crop below the Pettah Canal, and Byar Cane below the Sandiganawatte, Mahajetta, and Hanwar tanks are doing well, but the supply of water is diminishing. The want of water in Kachchakkodi and other villages is greatly felt: also pasturage so that cattle are fed with Varagu, but the supply is likely to last Some. Prices are rising, the following being the rates at the last market day.

Rice 1st Sort	10	Seer for rupee.
- do - 2nd - do -	10½	
Ragi ———	25	
Horsegram -	25.	

The health of the people is good.

Kamataki.

146

In Bagar or early Crops such as black and green Gram, Cowa gram, Maize, Sil Cajé and Coriander were sown in the Garden & Kitchen Kero, Kirmanta and Gandacelli but some of the black and green gram and Maize in the two former Gardens Lancewattered and some overthrown, while the Sil Cajé in the Gandacelli Garden has also died out. About 4 "Cada" of rain however fell on the 30th and somewhat benefited the standing crops. The failure of the usual heavy rains has resulted in the Paddy Crop being confined to Areikeré, Kodenderé, Kirmanta, Gandacelli and Kalyani tanks being attached by "Kattè coya". Various Paddy fields having received in some parts of the Gandacelli Valley. Sugar Cane, which is cultivated to a very limited extent in the Gandacelli and Kalyani Valley, is not flourishing in consequence of an insufficient water supply.

Rain, Rain" has not yet been sown.
Sowing to be done till the 20th or end
of August, but the Kuati, Chiraté
and Anoradhé rains are ne-
cessary for this Crop, and fields
are prepared and manured
ready for sowing: Some lands
however are not ploughed
for want of rain, and from this
cause also Chilly plants have
been altered to stand in Nur-
series, and the time for transplant-
ing has lapsed away - Those that
were sown with the oil seed have
either died or are withering, and
fresh Chilly seed is being sown. The
Kamadhi and Sher Tanks are dry,
so that the people are under the
necessity of taking water to ob-
tain water. There is no fracture
in some parts of the Tank, and the
supply of water is running short
Some report having as much as may
last for 2 or 3 months. Fever and
Coughs prevail in parts, and
Cattle are still suffering from the

W. Dean

Ans. No. 1

From The Commissioner Cuttack
Bangalore District
Dated the 15th August 1871.

To

The Secretary to the Board
of Revenue.

Sir,

In continuation of our letter
No. 1288 of the 28th ultimo, we transmit
in para 11 of which we stated the purport
of a report then shortly expected from the Superintendent
of Police and personal enquiries made by myself, I am glad
to state that the prospects of the season have
brightened during the latter half
of June, fourteen days of which the first
ten days, and received sufficient rain for
the agricultural classes. Having ascer-
tained how far commencement through-
out the District and with a view of
more timely shrewd all cause for
anxiety will be removed for some
time to come.

2. With regard to the real famine

about the condition of the people and their present food. It is to state that people specially agricultural have progressed by the seven years taught by the Last Famine and seem to have stored enough to last them about a year generally. But it is impossible to state in figures how much grain there is actually.

3. With regard to the indebtedness unaccepted Chiefs, ranging from about 10 to 20 per cent of the population, there is demand enough for their lands just now, and any present action on the part of Government to divert the same to foreigners is not feasible at present. Under existing circumstances they deem it to be well off, but their case may demand consideration if the land question is finally settled and this can only be ascertained after the twenty years as allowed, i.e. about the [illegible] people [illegible] may [illegible]

he set on foot in such districts, which during my Secretaryship to the Society and which in Consultation with the Scientific Engineer I will report about in due course.

4. With regard the cases about drinking water, it is impossible to state at this stage, where Veterinary Surgeons will become necessary. But as regards registered or unregistered cases however they may be, Reports will be taken as to what can be done by them Post.

5. With regard to foot and mouth disease during the season has been very little and the small cattle plague already subdued from disease, yet great attempts disposed to suggest sanctioning the Slaughtering sales of Cattle, when the question of a fair or last season will be finally solved, but the difficulty is that most of the cattle have

already seen, we are doing field-work
of the Settlement Punch Sur-
veying will go on.

Office of the Commissioner
Bangalore District
Date 3rd August 98.

From
The Private Secretary
to the Commissioner
Bangalore District,

To
The Executive Engineer
Bangalore Division,

Sir,

I am directed to state that a letter has been received from the Revenue Board stating among other things as follows, "Each "Taluk should have written the Taluks which "have received last year have not "been permanently or temporarily "repaired so as to retain what little "water may be secured hereafter. "An individual visit of the Taluks, "stating what has been done in re- "-gard to each is necessary and if "anything remains to be done in this "respect the necessary steps should at "once be taken in communication "with the Executive Engineer."

2.

2. I apprehend that in a [illegible]
[illegible] located under the above general rules
hardly apply to this District since the certain
cases referred to should however be
treated as directed by the Chief, and
I beg that you will at once take the
necessary action to permanently or temporarily
repair such tanks.

3. Further I think it will be
advisable to repair other breached tanks,
such for instance as that close by
Kaigoor, for in effect the principle
of the Act and instructions applies to them also.

Have the honor
to be, Sir,
Your most obedient Servant,
[illegible]
Dy: Commissioner

Bangalore Districts

To

R. Vijayaraghava Chari Esq.

Secretary to the

Dewan of Mysore

Dated - 16th August 1881.

D. No. 335.

Enc: 1

Sir,

With reference to a Govt. official letter from the Dewan, regarding bracked tanks, &c, I have the honor to forward for Mr Rungacharlu's information, copy of my letter to the Executive Engineer on the subject, and of his reply thereto; and to add as follows:-

II. The existence of

[illegible] and [illegible] in a [illegible]
state, is in [illegible]
a [illegible] of [illegible] to a District
and [illegible] that the [illegible]
ready at hand to store large
quantities of water, and thereby
[illegible] irrigation by large
areas of land [illegible] profitable
under profitable wet cultiva-
tion, are neglected. Of an
[illegible] allotment, in addition
to the ordinary Garden grant
for irrigation purposes, be
granted to the District say
of 1000 Rupees for five years,
then I can safely say that
not only will the [illegible] of
[illegible] lands be no longer
difficult, but numerous other
lands, now in a most desired
condition, (notably in the
Kadiata Taluk) will also be
benefited and to a [illegible]

safety - and all the repairs above mentioned will further come under the class, remunerative.

III. While on the subject of tanks, I beg to point out for the Hon'ble consideration, that the new Irrigation Government entirely on tanks the revenue below which is under 100 Rs, is not remunerative, and as far as I can see, it only resulting in such tanks not being repaired at all, thereby ensuring gradual deterioration with consequent diminution of revenue; as also a standing menace to the tanks below them, inasmuch as if wholly uncared for by Government, their ultimate breaching only becomes a matter of time.

IV. The Ryot, in case of

[illegible] to [illegible] to [illegible] to either
to [illegible] [illegible] [illegible] [illegible] at
their own Costs, or to [illegible] to
some Conciliation Meeting to [illegible]
them in the Shape of reduced
Rents.

V. Even with the Concession of reduced Rent, it would be [illegible] for Tenants to undertake the Purchase of such Farms, and to get money Contributions from the Rents conceded.

VI. The difficulty of this Question of 100 Years to construct Roads over by rendering the Roads to appear in reasonable Rents [illegible] with make up the Revenues to said [illegible] Districts, but it is easy to see how much Province will be Contingently Loaded by Mendicity to pay, in-

the repair and upkeep. In some cases, the pleas put forward, and resignations of the land holders, thereby virtually complicate the reduction of the assessment to the old limit, i.e, under 100 Rupees.

III. If there is to be a limit of revenue at all under which lands are not to be assessed at Government cost, I would beg to recommend that to the pitched sixty bow, and only to include small lands not in a series. And in consideration of the Right having to keep such lands in order, some general rule or principle of concession might be laid down.

I have the honor to be
Sir
Your most Obdt Servant

No 546
Enc: 1

Bangalore District
Deputy Commissioner's Office
23rd August 1875

To

The Secretary to the
Government of Mysore

Sir,

In reply to the Government Circular Notification dated the 2nd instant, I have the honor to enclose a statement giving the certificate extent of City and Wet Land in each Taluk, the quantity of Rain gauges in Taluk Head Quarters for the last 4 years (including the current year) from March to July, the Rainfall in August respectively, and the Price of Ragi and Rice during August

for the last 4 years.

3. It is impossible to furnish correct statistics in the absence of reliable information compiled carefully and to do so, some time is necessary. Such, generally, it may be stated that Pastoro was dry up to last month, and is just coming up. Grain stocks are about enough to last a year, but it cannot be said how much exactly, in figures.

3. Vitis vegas & Cotton. Wet. Sugar Cane is doing well, and vegetation has been started. Pernaji Paddy had very little chance of being sown. Kartik Paddy was sown wherever there was water in tanks, but, generally, it has been a failure. But

for Gadgaon taluka. Some of these lands may be sown with Rabi grain, if water fails in Kanara. More than a half of the cultivable dry seems to have been sown with Ruggi, Cumé, Jowari, &c. A little more remains to be sown, and the remainder, or less than 1/4, will be sown with Horsegram, &c., if Rain favor the first operations in September next.

4. For other particulars I beg to refer to my previous Reports on the subject, viz, Nos. 23rd, 26th, 28th, 30 and 33rd dated the 8th, 18th and 29th Ultimo, and 5th and 15th Instant, respectively.

5. I am glad to report that the crops that have been sown are thriving and the season so far is

Revenue Department.

Sir,

With reference to the Proceedings of the Diwan No: 3486-92 of 27th Ultimo, calling for a detailed account of the state of the Cauvery and condition of the rapids &c, I have the honor to submit the following report. —

2. As directed in the Proceedings under reference, I not only inspected the whole District but also obtained information from the Sheristadar Srirama Rau, from the Head Amildar of Tumkur, Kadaba and Channarayapatna, and from the Amildars of Kollegal and Gopinath Peta, regarding their condition and, report on their conditions, and personally enquired into the state of

of last year's stock of food grain in different parts of the district, and into the condition of the people. I have also called in communication with the respective Engineer and Executive officers such useful and instructive hints as will be found necessary to be attended in case of scarcity.

3. The District of Chanda is an open and plain country, and has no natural or permanent streams with sufficient water, nor is there any sufficient work of irrigation capable of containing water for one year excepting the Kurunjal tank. — Even in good seasons, the harvest is but moderate. — By means of small dikes and of cavities &c. capacities for from one to three by means of the eleven, fifty tanks for irrigation. — Some of these are so small, that

that city have to fill 3 or 4 times in a year to supply sufficient water even for a single crop. — The Jhils of Chanan called Jaya and Mangali, Sufjari = =Kar or Chanan and Nile of Sukkur = =tal channels, on which the irrigation of some of the villages in the district of Karachi and Hyderabad depend, are confined to a corner of the district. Egypt is not the only land and a thin sheet of water in the cultivation of land, as in the case with Sind. Sind in adjacent, more likely to resemble District of Cujarat and Bengal. — Under these circumstances, it can hardly be expected that in a season of drought, like Egypt would, without watering from rains, even themselves to avert the distress by raising from grains in their holdings by artificial means. —

4. The Bengal Army, which is generally Cantoned in Field, and are heavy in May and June, were so harassed and worn out by their fear, that they failed to overtake the ground sufficient to assail of the enemy, and procure for fodder down the Coast. Four Companies and many Recruits were plundered during these months, and the rest were left altogether unprepared. - Till the end of July, there were hardly sufficient Rains, the total Rain fall for whole District being 6 inches and a Quarter against 16 inches and 24 Cents in 1850. The light showers which fell now and then were confined to small Areas in each of the Talukas, and the Agricultural operations were in consequence at a stand still in the greater part of the

				1847.

the district. — Even the knowledge of
=fearsel to change for the better. — In
the during of the 17th & 18th, great scarcity
felt in some parts of Scandinavia and
Gallia, and Egypt, famine in a few
villages of the adjacent Gallia. Advant=
=age was taken of this, raising to plough
the fields that were sufficiently moist
and to sow grain on them which had
already been prepared. — That the
fields, which were to bought under
agricultural operations, were few and
far between. — Even these fertile ex=
=tensions were progressively by the
rain washing off for about 3 days, and
the Ports were in consequence very much
discouraged. — There were, however, light
showers in other localities of the Country,
Rovaniger, Kajaala, North of Uleaborg
and of this and Tavastehus & Nikkamaya
Kuopio

Calcutta, and of the Agricultural Chemistry of this Presidency, and commenced to commence and to carry on other operations. — There was again a cessation of rain-fall, till about the 15th of August. In some places seeds germinated, and in others they did not. — Etc, the Rivers became glowing, and the Ryots began to despair, and their minds with anxiety of the future. Rapi and other Crops generally require six, three & months, and in others more than this to mature, and are reaped in November. Now nearly 4 months of the Monsoon have elapsed, and the remaining 2 months, September and October, form too short a period for the growth of these two Crops.

5. In the last 4 or 5 days, there is a change in the prospects of the season

reason for the latter. — It has been
learning somewhat heavily from the
East, but it is most general throughout
the District. — It falls one day here
and on another day there, and so on. —
Under these circumstances I think
a general report on the subject will not
convey an idea of the present state of
things as will the tables. I submit therefore, a statement showing under-
neath which separately is ascertained amount
of the season, where bonds have been settled
and where trial crops have been sown,
and what remains to be sown, condition
of people, the extent of grain stocks —
available, and extent of population —
who are likely to be in distress and want
employment on public works, and the
best proposal to be made thereon —
and all information bearing on the

Subject. —

deaths of drinking water and fodder
of Cattle. -

6. As given at the above
mentioned statement, with view that
of the 8 cattle in this District, Gondia
and Sakoli have sufficient
rains for the present for carrying on
cultivating operations, and the Ryots
are busy sowing their land and
sowing seeds &c. As fodder of the
Juari Kha crop was already reaped,
and the remainder is in good condition.
There is no fear of scarcity in these talks.
Stock of good grazing and drinking and
fodder for cattle are ample. - Tanks
are getting brim and the sowing crops
are looking well and promising.

7. In the Sonegaon Talk, all
the villages with the exception of part
of the Sonegaon Khurd Jaumal in the Kod
and

and South-West parts bordering on Siva and Bhandara, are in [illegible] condition. They have had sufficient rains for the present. — The jungle villages of Seoni and Chhapara are in full vigour, which promises a good outlet for the surplus rice here, and have thereby encouraged the cultivation to a great extent. — Rain sufficient for cultivation have not fallen in parts of the Narsinghpur Tahsil, and the Rice have not yet been sown there; but there is no difficulty for fodder, and drinking water is available in the adjacent villages of the same Tahsil, and it is expected, therefore, that these villages also will get their share of rains. —

8. The Sadar parts and South-East of Chhindwara lie in the Tahsils of Tamiadandora, Chhapara, Sausar, Mohgaon, Umre

where the Ganges, the Kamanasa and the above mentioned 2 Single stream flow, which are already stated to exceed the Jamuna in its whole course also in part of the country, and Sagar island as stated therein, are in a flourishing state, but the rain fall being scanty, the sky cannot not yet seen, Bengalese the Ryots have been waiting for sufficient moisture in the fields.

9. The whole of the sea-board and the Western part of the Backergunge Dist. Noakherry Chittagong and Tipperah, and Northern portion of Chittagong = Kamanasa and Chittagong Hill districts are badly affected. Rain has been very scarce, and cultivation

is short.— Most of the fields are still unfilled.— But fortunately there is no scarcity.— Fodder for cattle and oil cake can be obtained easily everywhere, except in Ramanathapuram District, Kannanalli taluk.— If the rain fails before the end of August, ragi and other crops will be down.— If not, some paddy will be sent to Ramanathapuram for your export and planting should in three parts of the district.—

10. The tank and canal parts of Tirukkannapuramalli and those of Kannanalli District on the Kadalur side, are in good condition as they have been getting adequate and copious rains.— If in the same way the other tank parts of Tirunigal & Kovilvenni in Madurai and Ramnad.—

Yours

They have since heavy rains and the Ryots have sought their fields and sown Paji and other dry crops.

11. The Villages on the South and West of Kunigal have had no rain. The Channels of Suvatha, Kachichikanapura and Kaffah Lakshmipura on the Eastern side are in bad condition. — The Ryots here have not yet brought their Ploughs out, and their prospects are really not in any way encouraging. But all round about the above mentioned Villages having been blessed with good showers, the Ryots thereof have not yet lost heart. They all hope and anxiously expect their share of rain, and are ready to commence agricultural operations, no sooner the rain falls.

12. In the whole, I am glad to say that the present state of

in any way discouraging. Matters appear to have begun to assume a hopeful aspect. Emigration seems however still in the same unsettled state in each locality, yet Statistics of many extend to the end of December in the course of this week; for during last, Sept generally longest land & 2 or 3 times, but now the season having far advanced, they close the locks as soon as the 31st ending is over. In cases where they could not finish time to do so then, they finish the general ones, and low, Horsepans, Cloud, Sand, Lagan Jobs, or Canal Channels and other such growing crops, which furnish a large quantity of fodder besides the food grains. — If the canal receive good supply of water in September and October, Sadly will be saved —

Thereafter,

thereunder.

13. I beg also to forward herewith a statement showing what is the relative extent of different descriptions of cultivation, dry and wet crops, and the extent of cultivation in the present year. There is no record in this office of the extent of land depending for irrigation on wells, tanks, rivers and channels respectively. I have special orders to circulate to furnish this information, and as soon as I will submit it to you.

14. In comparing the extent of the annually cultivated land in the district with that which has actually been ploughed and sown this year, the latter is about 3/5 of the former.

15. There is, however, no

scarcity

scarcity in any part of the District, the people have got a sufficient share of food grains, which will last for a year in some places, and for some months in the other. - Some have hitherto kept the prices for want of food. - There is no sign of want among the lower classes in any part of the District, nor are they in need of employment. - Field labour can now be had everywhere, and which they prefer to the public works, in consequence of the coming more remunerative than the other. - The prices of grains have not risen as high as they were once. In the weekly markets at which food grains have been sold at the rates, which are not exorbitantly beyond the reach of poor and lower classes. -

All

* Rajsi ——— 36 lbs per Rupee
Rice ——— 16 lbs — do: — do: —
Koro grain ——— 38 — do: — do: —
Kharif ——— 36 lbs — do: — do: —
Dal ——— 12 — do: — do: —

All the people that have gone hitherto to the Coffee Plantations are those, who were already going there for earning, and who had received Advances from the Planters.

16. If any part of the District be not blessed with sufficient rains within the 3rd of this month, it will be necessary to open some Canal works, which should be selected in the vicinity of that locality in communication with the Executive Engineer. In order to enable us to put these works in hand, as soon as we see the necessity, etc: we shall have signed necessary orders to be distributed and got every thing ready. But opening any such works at present is not necessary, nor is it advisable for the reasons — 1st, that we must not draw away the Ryots and daily labourers from their Villages

5!

villages at this critical season to the prejudice of the interests of Mr. Ram and of their neighbours regarding labor; — 2nd/y that as the rain has been falling in all directions of the District, and field work being very important and more remunerative, sufficient labor cannot be had for the sake of the Public Works Department. —

1st/ Cattle are in good condition generally in all the talukas, with the exception of a few villages in the Nandigiri and Chinigari talukas, where Surra is still prevalent. The mortality among Cattle (Cow, Bull and Buffaloes) from all diseases from April to July last is 1,018 against 1,058 in the corresponding Months of 1901-02 in the whole District — a circumstance which shows that the loss is not so severe as last year. —

1st/ The Gardener, Reference, & have returned satisfactorily. Rain-Register up to date compared with the previous year,

year, the Executive Engineer's Estt. No: A of 3rd Instant with Enclosures and the Memorandum drawn by the Assistant Engineer Dow on the State of Kurigal, Kadda and Kamanlé in original.—

I have the honor to be,

Sir,

Your most obedient Servant,

Offg: Deputy Commissioner
Sunkúr District.

Executive Engineer's office
Sinclair Division

Sinclair 13th August 1881

To

The Private Secretary to
the Dewan of Travancore
Trivandrum

Sir,

With reference to proceedings No x of
the Dewan to His Highness the Maharaja, I have the
honor to submit the statement of works I would propose to
take up should famine occur. The lists are prepared by
Overseers after consulting the Salary Surveyors and I have
carefully revised them as far as my knowledge of the District
permits. The works there in fact are I may say all useful and
those that would be taken up in ordinary years. Most
of the works proposed is the strengthening of tank bunds
with earth.

2. I am of opinion that should sufficient rain not
fall by 15th of this month all the works enumerated in
this list should be put in hand on 1st of next month
(September) in such portions of the District as have not
received sufficient rain. These will afford work to all
needy people near their homes and would prevent their
leaving their homes in useless wanderings and enable them
to prepare their lands as soon as the latter rains fall.

3. If unfortunately, which may God forbid, the latter rains
also fail as soon as we are quite hopeless of the latter rains
that is November. I would recommend that the railway
to Sinclair and Sipkie be begun. Project being made
quite ready by that time. If the railway to Sinclair
is not all begun I humbly suggest that it be taken to Sipkie
at the same time instead of constructing it more up to Sinclair
to be hereafter extended to Sipkie as it would afford work
to

The Circulars be
informed of this case
The orders of the Dewan is now Despatched
to be prepared & Sent out to the Divisions
be ordered hereafter in this matter
Labour & poor relief

I leave Quilon
tomorrow Evening
Inspection. Sincerely
Yours

From

The Ex: Engineer

Sam'bur Division

Dy 3. Aug. 1881. No. A.

Submits details

of works he would propose

to take up should famine

occur.

work to most of the Talugs of this District.

4. In order to enable me to start all these works on 1st of the next South I should ~~_____~~ begin preparing Estimates at once. I therefore beg to be informed if you as president of the Local Fund Committee approve of my spending upto Rs 10 on each tank to put up plans and bund at every 100 ft at a certain fixed height above body while taking sections for preparation of Estimate. Early reply on this point is requested so as to enable me to prepare the Estimates, stones being fixed at a certain height work can be marked out at once to any desired height that might be sanctioned hereafter.

5. There being very many scattered works to be undertaken and the establishment very limitted I am of opinion that all the works may be carried out by the tank work system only the works near Head Quarters of Talugs being worked by the rules laid down in Famine relief Code.

I have the honor to be
Sir
Your most obedient Servant
C. T. Daniel
Executive Engineer
Irrigation Division

I think we may do this if the Govt raises funds.
Ag

I will issue orders on this subject upto Rs 15 to 20 th of this month
Ag

All tank improvements ~~tank work~~ ~~improvements~~ in

of the nature of the Estimates to be prepared for Famine funds under the Famine Code

Allegany county. Kindly send me a copy of your circular order & circular on the subject for my information & communication & subordinates of the Department as early as practicable.

CBD

Present state of tank works breached or otherwise damaged in 1880-81.

9 to 3

Chickmaikenhully Taluk:-

1 Chickmaikenhully Tank: Regd No 28 Revenue Rs 685?
Breach filled up completely.

Shettyhére Tank:- Regd No 19 Revenue Rs 3534. Breach filled up completely but the bund throughout requires bund raising and that is now being carried out.

Nadavankully Tank Regd No 36 Revenue Rs 642. Breach filling completed and raising bund in progress.

Chickenahully Tank Regd No 53 Revenue Rs 676. and

Adalgere Tank Regd No 30 Revenue Rs 1944 Breach in both of them filled up and bund raising in progress.

Hebbankully & Belligere Tanks Regd Nos 23 & 28 revenue Rs 621 and Rs 514 respectively. Bund raising of both of these tanks is nearly completed and filling up the breaches will be shortly put in hand. Will I hope be completely filled up to receive waters of November rains.

Annasandra Tank Regd No 108 Revenue Rs 530 Bund raising is in progress but as this tank does not progress quite as fast as the others the breach is not likely to be filled up to receive the November rains and if the Deputy Commissioner wants it to be filled up at once he had better write to Amildars for explanations and energetic action he is here to take very efficient steps to fill up the breach and the breach would surely be completed.

I'm Amildar has been ordered & sent to the spot to give every assistance. I now hear work is being finished. —

Nelavankully Tank Regd No 22 Revenue Rs 371 The weir washed away completely. An Estimate for rebuilding a weir is lately sanctioned and work is I believe put in hand. By the aid of the temporary Dam in face of breach constructed last year by Amildars the tank would I believe hold this year half its usual quantity, more cannot be done.

Debbagutta Tank

Dabbagutta Tank Reg No 13 Revenue Rs 420, is breached in 4 places as it was not thought advisable to put this tank in hand till the more important tanks were completed. It has now been put in Famine list.

Anney Cutty Tank Reg No 23 Revenue Rs 433 is breached and an estimate for rear Rs 1500 sanctioned to fill up the breach but as the repairs of Nowle Tank situated above it were not begun till late it was not thought proper to keep in this work. Enquiries will now again be made by me as to the state of Nowle Tank and if it is advisable to put the repairs of tank under repair in hand it will be done.

Yangehully Tank Reg No 11 Revenue Rs 1753. Would cost nearly Rs 10000 to repair this tank. It is breached in three places and would require also the rebuilding of a sluice and weir, but as the tank is an important one and gardens under it Valuable the project will be prepared and submitted for orders soon.

Doorgada Tank Reg No 26 Revenue Rs 3742. The weir of this important tank is washed away. An estimate was submitted but has been returned for modification. This year the tank will hold water only half full and 3 fear overlefs by the temporary Dam erected in front of breach by Ryots.

Moogavari Kan Cutty Tank Reg No 57 Revenue Rs 1762. The breach filling of this important tank is fast in progress and will be completed in a short time.

Kattigambully Tank Reg No 41 Revenue Rs 762. Breach filled up.

Kalkere Tank Reg No 13 Revenue Rs 681. The repairs of this work costing nearly Rs 2000 is in progress and this year if a temporary dam is thrown by ryots at a position that would be indicated in a seperate Communications, there would be no difficulty to irrigation. It is not thought advisable to fill up this gap permanently as a number of tanks in the valley higher up that breached last year are not yet repaired. This is a dam across the

Thamsa

Thanna river and not a Tank.

Dabagawa Tank Reg No 67 Revenue Rs 1513 The weir of this tank is washed away. All precautions will be put in hand as soon as the bridge work is completed. The tank holds water if it is filled by a Temporary Dam.

The Anicuts Vankat Rungiengar lived and takes a very lively interest in the repairs of all these tanks and I would bring him to your favourable notice and ask you to bring his name to the notice of the Dewan if a suitable opportunity occurs.

Kadala Tank.

Mayandia Tank Reg No 66 Revenue Rs 1146. The small breaches of this tank are filled up but the big breach which is 350 ft long and 32 ft high is not yet filled up completely. 300 ft of length is nearly completed and 50 ft length remains. The Deputy Commissioner will be asked to send the Kadala Tahsildar to Mayandia and stay there for ten days and with this help I can say for certain that the breach would be filled up. Even then only remains the rebuilding of the weir which it is not likely can be completed this year but without any thing done to weir the tank would hold half its full and with a small temporary Dam at weir the tank will hold its full.

Thanna river and not a Tank. — The small breaches in this tank are filled up but the big breach which is 350 ft long and 32 ft high is not yet filled up completely. 300 ft of length is nearly completed and 50 ft length remains. The Deputy Commissioner will be asked to send the Kadala Tahsildar to Mayandia and stay there for ten days and with this help I can say for certain that the breach would be filled up. Even then only remains the rebuilding of the weir which it is not likely can be completed this year but without any thing done to weir the tank would hold half its full and with a small temporary Dam at weir the tank will hold its full.

Thumbagy Tank Reg No 125 Revenue Rs 901. The breach is now filled up and bund raising will be put in hand.

Veeraragava Tank Reg No 26 Revenue Rs 457. The weirs were washed away and are rebuilt.

Ponnabandra Tank Reg No 65 Revenue Rs 237. The small breaches in this tank are filled up. Completed.

Rakkavaichebbera Tank Reg No 124 Revenue Rs 274. The tank is breached in two places, would also require rebuilding of a new sluice and weir and two dams in Cody Kallahi which would cost at moderate Rs 5000 at least and as this would

would be more than 10 years revenue if repairs were delayed till the more important tanks were taken up. Seven villages depend for their water supply on this tank. The Deputy Commissioner Mr Shashadri Iyer also said that the revenue would increase to about Rs 600 when tank is fully repaired. It has therefore been put in the Famine list.

Jedya Tank Reg. No 169 Revenue Rs 126 is breached would cost nearly Rs 2000 to repair it. Never kept off till important tanks were taken up. Put in Famine list. Revenue was Rs 300 few years ago.

Darikully Tank Reg. No 163 Revenue Rs 161, not taken up as it would cost more than 10 years revenue.

Nagalapur Doddere Reg. No 155 Revenue Rs 338 Half length of weir washed off. Estimate for building a new weir sanctioned and work put in hand. Will contain water half tank full now. If possible arrangements will now be made to enable the tank to hold it full supply by November rains.

Vadavangatha Tank Reg. No 159 and Reg. No 160 Revenue Rs 120 & Rs 158 Both these tanks breached last year. The breach of tank 159 is filled up. It is recommended that the bed of tank No 160 as well as lands under it be irrigated by tank No 159. In the Famine list, it is therefore recommended that the capacity of tank No 159 be increased.

Mangalore Tank Reg. No 158 Revenue Rs 115 Estimate will be submitted, breach will be filled up on receipt of sanction.

Isnoor Kere Tank Reg. No 262 Revenue Rs 3064. The tank had suffered but little, and that is being made good. The irrigation works to take water from tank for irrigation have suffered seriously. Estimate for repairing these is being modified as per orders of Supdg. Engineer and will shortly be submitted. If these permanent works are not ready by December sanction of Rs 200 will be necessary to build temporary works as were done last year.

Honnavally Taluk:

Alsur Tank Reg. No 155 Revenue Rs 420. Weir entirely washed away. Estimate ready for submission.

Kalgoopa Tank Reg. No 172 and 3 other tanks giving a small

Small revenue of rain Rs 200 and under have not been taken up except one Monthigutta which has been inspected.

Kanakegere Tank.

Agrahara Tank Rly No 6 Revenue Rs 525 Bund filled up. Bund raising is in progress.

Madgheri Tank.

Lakalenkally Tank Rly No 2 Revenue Rs 1953 The estimate for this tank has been returned for remodification and will be resubmitted today.

Kumbal Tank.

Amirthavarshini. which supplies water to seven tanks has been nearly completed.

The marginal bunds of the Koppa series were also breached but repairs have not been taken in hand. The Executive Engineer Mysore Division has been asked to inform me of the state of tanks in his District and transfer all papers connected with these tanks in this District on receipt of this information they will be inspected and necessary steps taken.

Koppa Tank Rly No 122 Revenue Rs 1582.

List of Tanks to be repaired Sumkur Taluq

No	Village	Name of Tank	Amount required for 5 years	Probable Cost	Remarks
1	Sumkur	Sumkur Tank Regd No 1	460	3000	The water supply in this big tank is insufficient for irrigation of all the lands under it. It is therefore recommended that its capacity be increased by raising bund by 2 feet.
2	Do	Doddakere Tank Regd No 4	1140	6000	Strengthening of Bund.
3	Yedlow	Yedlow Tank Regd No 2	681	3000	Strengthening of Bund and raising weir by 1½ ft.
4	Do	Kenchavadi Tank Regd No 3	144	500	Strengthening of Bund
5	Komarlay	Komarlay Tank Regd No 113	2130	15000	Do
6	Do	Sadlie Tank Regd No 125	192	1000	Do

Kgoro 185

					Bank being the only important tank, it is proposed to raise the wall by 3 ft and increase the capacity of tank, the bund being also strengthened. The Amildar says that a good area of irrigable land now lies fallow for want of water.
8	Kora	Kora Tank Kgoro 233	1963	2000	The bund is reported weak and requires strengthening.
9	Do	Mannikka tank Kgoro 244	608	1000	Do
10	Do	Mattanhully Tank Kgoro No 2		4000	This is a breached tank. If repaired it will give a revenue of ₹1000 and will be a very good famine project.
11	Bellary	Rammangalla Tank Kgoro 312	443	1000	The bund is weak and requires strengthening
12	Thalur	Basavanhilly Tank Kgoro 368	491	1000	Do
13	Do	Koyal Tank Kgoro 670	693	1000	Do

List of Tanks to be repaired - Kadab Taluk.

No	Hobly	Name of work	Ref No	Average revenue for 5 years	Probable Cost	Remarks
1	Goobby	Arsiyur Tank	25	263	2179	The weir is half breached. An estimate to rebuild weir and raising of bund submitted to Supg. Engineer.
2	Kallur	Rakkanaikkenkere	124	268	2000	This tank breached in two places last year. The sluice is in bad order and shall perhaps require rebuilding. A new weir about 150 ft long shall have to be built as present weir length is insufficient. It is recommended that this tank be taken up as the Deputy Commissioner is of opinion that there would be a revenue of Rs 600 on tank being perfectly repaired. Seven villages depend for the supply of their drinking water on this tank and will be deserted unless the be rebuilt.
3	Do	Sunpeey Tank	125	979	1500	This tank breached last years. The breach is filled up but the bund being very low, it shall be raised and strengthened. Hence further sanction of Rs 1500 now asked.
4	Mayasundra	Vadavanguttu Tank	159	78	1000	Vadavanguttu Rg No 160 breached last year. This tank is situated below the tank under report. It is recommended that Rg No 160 be abandoned and its bed and lands under it irrigated by tank under report whose capacity it is proposed to increase on that account.
5	Do	Jadaya Tank	164	167	4418	This tank breached last years. Estimate is submitted to Supg. Engineer but not sanctioned it is behind because amount is more than 10 years

6	Chittambully	Maniambully Sanl	228	339	2000	This tank cody is breached and a low temporary one is built by ryots. It is recommended that the new cody be built at old level and bund brought to section. Rs 2000 now asked will be required for bund. — Weir will require another 2000 Rs.
7	Do	Edagai Sanl	229	395	1000	Bund is low and is recommended to be raised.
8	Soorovadery	Soorovadery Sanl	252	2281	3000	Repairs are required to the works constructed to take the irrigation — channels over the cody Vellahs. Detailed estimate will shortly be submitted.
9	Dalbagutta	Dalbagutta Sanl	316	175	1000	Bund to be strengthened.
10	Nelloor	Kannacapha Sanl	239	57	3000	This tank breached in 1873-74. Will when repaired yield a revenue of about Rs 1500.
11		Kirsamully Soorovadere Road 11 miles @ 100 Rs per mile	This may defered for the present		1100	This road is throughout bridged and trunked but now abandoned I do not know for what reason. It is a pity to throw off such a good work. If Rs 1100 be now given it can again be brought to use and where trunks are breached seriously good ramps cut; Rs 20 per mile may then be given every year for ordinary maintenance. This a good Zamindari road

Abstract

Details of works	Total revenue of Taluks	Probable Cost	Remarks
12 Taluks —	7199	15027	
Municipal works —	—	850	

List of Tanks to be repaired. Kungal Taluk.

No.	Hobly	Name of work	Reg. No.	Average revenue of 5 years	Probable Cost.	Remarks
1	Kungal	Bagur Tank	8	1812	3000	Earthwork required to bring the bund to section throughout. Slight repairs are said to be required to the two sodies. It is also proposed to raise the Cody by about a foot to increase the capacity of the tank. By doing this no valuable lands will be submerged; and the tank will yield the revenue as per survey settlement viz Rs 3623.
2	Do	Kittankammagala Tank	6	777	300	Earthwork to rear slope of bund required as the same is too flat, other repairs are being carried out.
3	Kottagere	Gingere Kuttay	13	76	300	The present revenue is below Rs 100. The people of this village are not well off; they suffered much in the late famine, and are therefore unable to maintain their tank. The auildars is of opinion that if the work be carried out by Government the revenue as per survey settlement viz 115 may be realized.
4	Do	Bhuktahully Tank	35	140	100	This is a Kodagi Tank, same remarks as above. These two works only have been proposed in this Hobly. Although they are not good in importance to revenue Vs yet they may be of use to the ryots, who are said to have not recovered yet from the ravages of the late famine.
5	Yedigiwgi	Turvanurulatta	63	[illegible]	2000	Three breaches are said to have been occurred in the bund, and the cody also requires some repairs. This is the only work found in this Hobly and so may be carried out to afford work to the ryots. The tank when repaired will yield Rs 361 as per survey settlement.
6	Hooligurdwagy	Durumboody Tank Channel	93	735	5000	The irrigation channel is not in good orders. If the channels be repaired and the lands taken up, this would yield as per Rev: Survey settlement

						on the work
7	Do	Nidsalay-Tank	96	2 58	300	Earthwork required to bring the bund to section.
8	Byadarahatti	Yelagulwadi-Tank	221	9 23	1500	For bringing bund to section and repairs of sluice and toby.
9	Hutti Hosga	Hutti-Tank	196	1 31	1000	This is a Kadaej-Tank. Earthwork required to bund.
10	Do	Halwagalu Tank	203	1 9	1000	Do Do Do Both the above are Kadaej Tanks. The Amildar is of opinion that these tanks may be repaired by Government, as the Kadapdars are unable to maintain them. These alone have been proposed in this Hobly. The Deputy Commissioner will decide on this point.
11	Kaspa	Bidarkola-Tank	127	2 53	500	This would be required to fill up the breach and must thus been brought to section.
12	Do	Hosgani-Tank	132	3 11	300	The breach is required to be filled up. The bund was been brought to section.
13	Amirthoor	Dodda Kere	156	12 24	1421	Estimate submitted to Sup: Engineer for sanction.
14	Do	Kotiel Kere	157	"	934	
15	Do	Hosklur Tank	162	2 17	200	Earthwork required to bund
16	"	Halal-wonda-Tank	168	4 11	200	Earthwork required to bund and the sluice also to be repaired
17	Do	Kadiashelly-Tank	170	2 03	1000	Do Do Do
~~18~~	~~Do~~	~~Tavatha Tank~~	~~173~~		~~100~~	~~Earthwork required to completely bringing up the bund to section~~
18	Do	Timajapura-Tank	174	6 47	600	Earthwork to bund & repairs to sluice & toby also required.

The above 4 tanks are all serial tanks. They are supplied by water from the channel at the Amirthur Gundi. All of them are important and require to be restored. These will afford work to the villagers close to their homes.

19	Kungal Hulisundara Road (20 miles in length 100 Rs per mile)		2000	May be taken up to afford work to coolies on road side as there are no other works closeby. However the road will be brought to thorough traffic able order. The sections of road beyond this Taluq boundary is in a better state and the road leads also to Railway at Mundgod, hence the necessity of thorough repairs which are not all earthwork, but ordinary road repairs.

C. J. Dalal

List of Tanks to be repaired – Sira Taluk

No.	Hobly	Name of Tank	Area of Tank	Average revenue of 5 years	Probable Cost.	Remarks
1	Sira	Chickakere	1	310	500	The bund requires strengthening and pitching of stones of revetment here and there.
2	D°	Narasipura Tank	12	762	1500	The supply of this tank is stated to be quite insufficient to meet the wants of the lands under it and raising the body by 1 ft is recommended. The necessary earthwork and stone work may cost Rs 1500 --
3	D°	Kuddakola Tank	19	288	2500	The capacity of this tank is very insufficient. A feeder from Sira Dodkere would be necessitated in last Famine. It is recommended that the body be raised by 1½ ft and bund strengthened proportionately
4	D°	Kalkere Tank	9	434	1500	The bund requires strengthening and the body raised by a foot. The tank is very shallow. Some leaks in Bund also requires to be stopped.
5	Agrahara	Chickkere	77	729	500	The bund is not sufficiently high. It should be raised.
6	D°	Yellababagy Tank	81	1309	500	To bring bund to section.
7	Sira	Mudigere Tank	22	355	500	The bund requires strengthening
8	Bookapatna	Konchully Tank	109	2319	500	To bring bund to section.
9	Nadavara	Nadavara Tank	130	636	500	—— D° —— D° ——

				1958		
10	Do:	Lobiel Lere	128	958	500	—— Do —— Do ——
11	Do:	Hosuru Tank	134	1029	500	—— Do —— Do ——
12	Do:	Chickanadra Dad Lere	141	2567	4000	This Tank is very important. It has two codies and one is at a lower level than the other. The lower cody to be raised to the level of the higher one. Bund to be strengthened also sluice to be repaired.
13	Hubli Lindāy	Bommanahalli Tank	177	261	2000	The tank was partly breached last year. It shall have to be rebuilt also the strengthening of bund and repairs to penstock are required.
14	Do:	Chinthahally Tank	180	431	500	Strengthening of bund.
15	Do:	Dad Bangere Tank	171	742	500	—— Do ——
16	Baragur	Hundi Lindāy Tank	200	562	500	—— Do ——
17	Do	Budamaranahally Tank	195	509	500	—— Do ——
18	Do:	Mundalee Lommalere	197	460	500	—— Do ——
19	Sira Mondeferry Road 25 Miles @ 100 Rs per mile		-	-	2500	This road is in very bad state and not quite trafficable. The tunnels have fallen down in many places. The ramps to some of the nullahs and rivers are very steep and require cutting. The road is neither gravelled or metalled in some places and these may be gravelled. The road passes on the Sira Dad Lere. The bund of this tank is in many places less than 15 ft in width. It will be a good thing to widen the road to 16 feet at top. It is therefore recommended that Rs 100 per mile be given.
	Sira Amarapur Road				3000	An Estimate for Rs 7023 has been sanctioned & Rs 4837 expended thereon. Work on

This ~~work~~ Road is now stopped on account of want of funds. Additional allotment of Rs 3000 is now asked to complete the Road. It's an important local Fund Road.

16. 8-81

2/10

Crop Report in the Nairobi District up to 1st August 1881.

1. There are six mbalis in this District containing 228 villages of which 21 are uninhabited now. The total area of land under cultivation is 50,395 acres and 20 perches; 6,350 acres of land have been ploughed up in the six mbalis. In the Eighth Mbali 2,150 acres have been ploughed up and only 500 acres in the Mbali of Kabete are cultivated. Sowing of Maize, Wheat, & Sugarcane has just commenced.

2. Only one shower of rain fell during the month of May and one shower again on the 30th July - There was no rain in the interval but dews were frequent - A great number of pits remained unploughed and the small extent of land that was ploughed was not done owing to want of rain. The Mangeria (early) Crops

Wrong & Cooper
This is not correct
In May rain fell not in Nairobi
In June 2-5.
In July 98 centimetres
114

is noted for its cocoanut gardens. These trees are generally in good condition and their yield is normal. Area-but trees which are to be found only in the Nundendéé district of this Prefecture are generally in good condition. There are no other standing crops than those mentioned above. If the N. E. monsoon rains fail the crops of Kaoliang, Kaoliang, Millets and Bengal Grams will be cultivated and if the tanks be filled the spring harvest Crops will be raised.

Prices at recent fairs are fluctuating with a tendency to rise. Persons possessing capital are buying up Kyoto stocks of grain where procurable, and the supply in the bazaars is on the decrease. Kyoto do not freely part with their stocks, though the market rates are

Prices

I never heard this. I had been sick at the Talook. The Circle and Head records do not show the famine, on the contrary it appears that none is suffering from want of food

cattle and one bread in the Taluq, and the aged and the young sell bundles of firewood collected in the jungle, and live on the proceeds and in some cases have begun to sell articles of food as the said fig. explains

124

supplies, and grain to help them in tiding out their scanty supplies of food. In view to prevent these poor classes from suffering from Chronic insufficiency of food in the event of failure of crops I beg to suggest that relief works of which particulars hereafter might be started in the shape of tank repairs &c.

Owing to the absence of rain the early crops of black gram and green gram, Cholam and Cumbu failed completely. The Vaatha standing crops under tanks are withering in many parts for want of sufficient water in the tanks. This Taluk is

Corn & black and green gram are
wintering. With the beginning of the
Current month there has been a change
in the weather. Night showers have
fallen all over the Taluk and the
Ryots taking advantage of them have
begun to till and sow their fields
with Ragy and Avare. Of the numerous
fairs held in the Taluk several of the people
and chiefly Coolies will be threatened
with famine. About 3/4 of the inhabitants
have grain enough for their maintenance
till the end of the year. Of this pro-
portion about 1/4 are farmers in
Comparatively good circumstances. The
people in and around Kolar depend chiefly
by trade and many trading and
general quarter of them the people
Bhovi, Vakkaligas, Reddi and Komatis Chetties
The Nadigs & Gauliyas, Telugu, and
Musulmans are the poorest in the Taluk,
and the inhabitants are chiefly small
farmers and agricultural labourers.
The last class, Coolies, having no
occupation have taken to Catch fish
in tanks which are however rapidly
becoming dry, and have begun to
take

fishing by Hire
people not allowed to
water during Sunday
the village
Catch fish when
tanks dry
for their own use. Rep.

are high Compared with
those which prevailed in fair
weather last.

Post Stock of food grains

The approximate quantity
of food grains in the taluk
is 5,000 Khandies. Khandies - a
Supply adequate for the needs
of the population of the taluk
for about 6 months. This has
no reference to the other necessary
articles of daily food such as
Condiments, salt, Vegetables, etc. &c.
The Ryots were unwilling to state
the actual quantity of food
grains in their possession lest
it might be attached for Govt.
Contingency dues. I am inclined
to think that the actual quantity
stored by Ryots exceeds the en
figure given above. My reason
for this opinion is that during
the past 3 years the seasons were
normal and the harvests en
abundant. Prices enhanced en

advantage of being pecuniarily
circumscribed, takes bringing em-
ployment for it more to the door
of the employing. Eg. to who will
not leave their villages and
fields and seek work at a
distance. The repairs are
chiefly earth work to bunds,
supplying facing stones to weirs
weirs, and putting sluices in
order. These will give employment
to those in need until the
cultivation season is finally
over when if the rains do
not fail more extensive works
will Railways, etc.
will have to be taken in hand.
for the relief of the distressed.

In the event of the failure
of the rains during this and
the subsequent months the ne-
cessity for starting the relief
works would from limits to
limits become apparent.
Relief works will afford employment
for large bodies of those who

exceedingly, and the Ryots
Consequently laid their surplus
produce by, & were in anticipation
of a bad season and price in
the prices of food grains. This
was not the state of things at
the beginning of the late famine
1876-78 for, it is well known that
the excessive rains of the year
1875-76 had immediately the grain-
pits of the Ryots and destroyed
the Ragi, & grain
the Ragi, stored in them. Since
the Ragi rains failed 1876-78
embarrassed small farmers
a good deal, and approximated
their condition to that of ex
labourers.

The Cultivable waste with
about 500 Candies of good grains
in the proceeds of the Salut and
Zilladir the, wicked with about
1000 Candies.-

The following is a list of tanks in the Salut proposed to be repaired.

Tank Number	Name of the Tank	Revenue			Cost of Repairs		
1	Ponnavalli Periakal Tank	114	4	9	65	0	8
2	do Bandaarakal Tank	643	4	3	1,193	0	8
62	Tikkiri Tank	1140	0	2	8,224	12	8
70	Gurgadakalli Tank	628	8	0	460	5	8
85	Kerigode Tank	603	0	0	1,230	10	8
113	Kulkeri Middlekutty Tank	119	0	0	210	15	0

142	Arlagoppay Tank	103	5	9	2,236	10	8
	Bellaré Amanna Gowdi Road	0	0	0	1,200	0	0
	Total Rupees	5,784	9	2	14,521		4

These will not only give employment to the distressed, but will also be remunerative to the State in that the irrigational resources of the District will be materially improved. They have the further

are willing to work and rely
work to [illegible] would be also
Concentrated to a great extent.
Should the Crops fail and only
Remunerative relief works be in
progress the Coloring Classes
with their families will very es-
pecially leave their villages
and go to the Railroad, Coffee
Plantations and elsewhere in
search of wages - the Railway
works will thus have the effect
of keeping the Coloring Pop
from straggling - For these
reasons the starting of the Ra-
ilway works would be a subject
worthy of Consideration.

There is water for Man and
beast in wells and other Reservoirs in most
places. Pasturage for Cattle is
reached in except under tanks.
Straw in stock might last till
the end of the Current month.

Of the 206 tanks in the
District only 7 Contain from

to 3 months supply of water. The remaining tanks are dried up. 40 tanks are in disrepair. 7 tanks were breached by the heavy rains of the past year and only one of them has been taken in hand by the Public Works Department.

Season in the Tungabhadra

1. I am happy to say that this Taluk is in better condition than Gonavalli. There are 8 Circles in the Taluk consisting of 343 villages, of which 297 are inhabited and 46 uninhabited. The extent of holdings is 98,749 acres and 15 guntas - 92,336 acres of land in 343 villages are ploughed up. Kharif Paddy has been sown on such holdings. The young crops are thriving - dry crops are being sown in parts.

2. 1.93 of rain was gauged in May 3.30 in June - 93 in July and

2 inches of rain fell from the 1st to 3rd inst. These fortnightly showers have enabled the Ryots to commence sowing operations in many parts. More rain is anxiously expected by them.

crops

3. The Kharif Fasli Crops under tanks have been harvested, and the outturn has been fairly good. Sugar-Cane, Cocoanut and Arecanut gardens are generally in good condition.

Rice

4. The market rates are fluctuating and have advanced to what they were a few weeks ago. Foreign grains are not procurable in large quantities as the Ryots are very cautious in parting with their stocks.

condition of the people

5. The population of the Taluk Consists of 85,000 souls. The Ryotwari Roots of poor grains in certain Villages. In the event of the failure of the monsoon, about 10 villages comprising 1/3 of

the population in the villages and will require State aid in the shape of relief works &c. ~~will be visited with famines~~, the inhabitants of the remaining 2/3 villages have good grains sufficient for their requirements. The supply of water for drinking purposes will suffice for present requirements. At the present time there is no demand for relief works among the agricultural classes.

6. There is a pasture for cattle & also as well as water in all the villages. The Eris also have besides considerable streets of jaggi trees.

7. The number of tanks in the Taluk is 82, of which only 8 are in fair order, the remainder are in disrepair. During the past year 4 tanks were damaged. The following tanks which are conveniently situated in the central circle of the Taluk are proposed to be repaired

Sentence added Mar 1/pm

They will appoint Peons to Guard
& the Ryots Cattle so will not
Leave their Village and Exit
work at a distance and will
also keep Ryots from straying
from their Houses.

102	Kattepe Tank	200	"	"
173	Kodagidalli Tank	300	"	"
168	Kolakaranai Tank	200	"	"
150	Amerter Small Tank	100	"	"
156	do Large Tank	250	"	"
	Total Rs	10350	"	"

There are at present 12 tanks containing water, varying from Six months' supply to 15 days' supply. Of these only one tank contains 6 months' supply, water, one 4 months' supply, 2 contain 3 months' supply, 4 two months supply 1 one months' supply and 3 fifteen days' supply.

No rain has yet left the hills for the Coffee districts, being afflicted with distress.

Places in the Kadaba Taluk

This Taluk is in a better Condition than the Somwarpet Taluk. There are eight Samuths or Hobles in the Taluk Consisting of 475 villages, of which 43 are inhabited and 36 deserted.

2. Rain fell in all the villages. The quantity gauged at the Gutti Taluk Cutchery has been as follows as Compared with the past

two years.

	June	July
1879-80	1.30	2.10
80-81	3.40	3.60
81-82	1.80	1.85

1.35 inch rain fall from the 1st to the 4th of the Current Month. The Sky Continues over-Cast and there are signs of Rain.

3. The total area of holdings in the Taluk is 34,866 acres and 31 Guntas. Of this extent 18,00 acres of land have been ploughed up in 39 villages but only 3600 are sown with Ragi, Navani and Togari. More rain is needed to enable the Ryots to Commence ploughing Operations and to sow dry Crops in the remaining extent of land.

The Wet Crops under channel tanks have been harvested but the young Crops standing on about 300 Candies of land below the Gudai, Kullagatta, and Mullasandra Tanks are

likely to suffer if rain do not fall shortly. If the rains unfortunately fail this year the failure is not likely to injuriously affect the produce of Coconut and areca nut gardens during the Current year.

4. The population consists of 68,000 souls according to the Census of 1881. The approximate quantity of food grains in stock is 50,000 Kurinarji Candies. In the event of the failure of rain 158 villages consisting of about ¼ the population of the Taluk will be threatened with famine and the Eyots in the remaining villages of the Taluk will be able to tide over a great portion of the year.

5. The quantity of water for drinking purposes both for man and Cattle in the Taluk is sufficient for present requirements. The Eyots

have in course Passage Water
for their Cattle. There is also
shortage in waste tanks.
6. The total number of tanks in
the Tank is 380. Of these tanks
193 are in good Condition and
187 including 2 tanks damaged
last year by excessive rain, are
in need of repair. 13 of these
are now being repaired by the
Public Works Department. At
present 29 tanks contain water
4 of them in Mullagutta, Kanikapu
Kulliri and Tarini Tanks have a
supply of water varying from 2½
to 3 months. The other tanks have
not more than a fortnight or 20
days supply of water in them.
In the absence of rain in this
and 2 subsequent months the
following tanks may advantageously
be repaired in addition to the
spring trail way works. —
In the Public Interest

Aiyar Tanks.

In the Kiriki Tank. Kanakapy and Singapin Tanks.

In the Kittahalli Tank. Marimbé Chengari, Tanks and Kittahalli Kadaroo.

In the Kulla Tank. Kadichanikan Tank and Kinnadla Tank.

In the Alexander Tank. Jadiya, and Nagalapin tanks.

In the Turuker Tank. Sitakeé tank and Jungamana Aré.

In the Ambagattada Tank. Gottiker Tank.

In the Kadaba Tank.

2 Poygalee and Kanoor tank.

The repairing of the above tanks and Escents will appear employment and the means of subsistence to the inhabitants of the Villages situated far from the Railway works and

their homes.

7. We have yet kept the Talut being afflicted with distress but [illegible], by est. 1035 in Sunday who usually frequent the Coppee Districts at this time of the year have gone there.

8. The prices of good grains have risen Considerably to what they were a few weeks ago. As grains Can now be easily had as the Ryots have stored the same for their own Consumption in anticipation of a scarcity.

I have the honour to be

No 241

Deputy Commissioner's Office
Bijapur District
Dated Bijapur 1st September 25

250

To

The Secretary to Govt
Revenue Department
Bangalore.

Sir,

With reference to your B.O. No 55:22
90
Ag. Secy. 85 dated 11th January 25 forwarding the
Chairman's giving his decision called
for in regard to the Revenue complaint from
Patil of Nandeshwar, and the recent rains
have improved the prospects very considerably
as far as the Kharif crops are concerned there
is no fear of any crops suffering for want
of rain.

2. In reply I have to forward herewith
the District Police Diary for the month
and the remarks in connection therewith
thereon. I would invite attention to the
fact that the Police Station Officer
of Sindgi Taluka has not forwarded
any report regarding any part of this District

I have the honour to be
Sir,
Your most obedient servant

Deputy Commissioner
Bijapur District

Notes of Lectures delivered in the
Session 1881/82.

The Law assigns sufficient
residence for the yield in light soils, owing to want of
sufficient and reasonable rain in June and
July to moisten the seeds. The heat and dry
winds that usually prevail have a baneful effect
upon vegetation and ripening.

Damage from the Growth of
Grasses, the Aggregate Amount
and Kind of Damage (Actual) in connec-
tion with each and by the Year. Indemnity
Magnitude in so far as Damage from
the Field, and any arranging done for Pasture
and to what Class Privileged and Non-
Privileged Land Pasture belonging to
Neighbouring Farms.

There is no Law to enforce
from any part of the District, and the
usual annual Influx Taken under advan-
ces.

No agrarian Crime.

The Magistrate's Duties have
suggested nothing to be done up to Session
but there is no necessity for this
suggestion, demand for Labour is abundant
even greater than the supply. The Railway
Department has work and even Engine

Departure

Respectfully complains of the Deficiency of
the Standard of Gold & the Legislature is desir-
ious and will obtain of Congress repaired
and the Gold Coin Circulated to every of
the United States & their Territories and the
Country. Therefore Resolved that the
Governor is hereby directed

The Volunteers of Marion County
are admirably mounted. The Cavalry
Horses with Caparisons, Equipments
Navajoes, Blankets, Bridges, Saddles, Stirrups
Bits, Bridles, and the Accoutrements of Cavalry
Men forcibly with Sentiments of Gratitude
the absence of any agrarian disturbance
from other Counties the ordinary Quota with
elected Commissioned Officers of Field Officers
are Large and can be easily any very large
part of the Governor Forces the Counties
can be maintained they may be Stationed
at the Seat of their appointment.

Respectfully
Major District

From
The Deputy Commissioner
Christchurch

To
The Secretary to the Inland
Revenue Department

Sir,

In acknowledging the
receipt of your letter Miscellaneous
No 5,150-91/90 of the 27th instant
I have the honor to report as
follows.

Wgt. 1.1 i No. 2. Any letter No 8,129 of the
1st instant and its Inclosure hereto
annexed from the District every
week, as well as any significant
report of the General Duties —
visited by me, will, I believe
have given the Inland Revenue
idea

241

[illegible] of the [illegible] of the Lecture until a few days back. Since then, I am hoping to be able to visit that place once more & have facilities, and a right chance for the better arrangement. Until [illegible] the last few days, the main part of the Lecture would be ready but I am [illegible] and [illegible] a letter that [illegible] was received with merely [illegible]. Circumstances [illegible] & hotel and a note that this environment will not [illegible] me, but will continue [illegible] expectations [illegible] of the Lecture was felt would [illegible] be removed - Relief measures of any kind would then be quite unnecessary. Having made these preliminary observations, I shall proceed to give you the information called for in the

far as the machine and local
permit of my doing so.

3. The duty on Lucerne hay
generally begins about the middle
of April, and last until the
middle of August. The main part
of last year's crop was shipped
is shown in the following table:

Feilding	1	6
Sanford	11	77
Kauhuhu	6	"
Dodder	10	9 3/4
Herignes	12	15
Bradbrook	11	95
Hawkeye	12	18
Pamapaka	9	85

4. Estimating these figures
until the quantities exported this
... month the 23rd instant, we
